Blind River

Town of Blind River Municipal Landfill Site

ANNUAL MONITORING AND OPERATIONS REPORT – 2023

July 2024
KEC Ref: 2331

Prepared by:

KRESIN Engineering Corporation

TABLE OF CONTENTS

LIST OF APPENDICES

1.0 INTRODUCTION

The purpose of this Annual Monitoring and Operations Report for the Town of Blind River Municipal landfill site (Site) is to meet the annual reporting requirements identified in the Site Operations and Maintenance Plan (O&M Plan). The O&M Plan indicates that the Annual Operations Report should comply with the requirements of the Environmental Protection Act as legislated under Regulation 232/98. It is noted, however, that the Site and its operation are subject to Regulation 347. Copies of the Environmental Compliance Approval (ECA), formerly C of A, and subsequent amendments are included in Appendix A. A copy of the stormwater management ECA for the waste disposal site (ECA No. A-500-7134513066, issued October 26, 2022) is also provided in Appendix A.

This document reports on monitoring and operations at the Site for the 2023 operating year and was prepared with reference to the MECP's *"Technical Guidance Document, Monitoring and Reporting for Waste Disposal Sites, Groundwater and Surface Water (Nov. 2010)".* This document also addresses Annual Reporting requirements identified in the O&M Plan.

1.1 Location

The Site is located approximately 2 kilometers east of the built-up section of the Town of Blind River on the north side of Highway 17 (shown on Drawing B1). The Site is legally described as the south ½ of Lot 7, Concession 1 of Striker Township in the District of Algoma.

The coordinates of the Site, acquired through the use of a GPS surveying system (NAD83) with a horizontal accuracy of less than 5 centimeters (cm), are as follows:

	UTM Coordinates
Northing	5116641.907m
Easting	354605.951m
Zone	17T
Latitude (decimal degrees)	46.187825
Longitude (decimal degrees)	-82.884092

1.2 Waste Accepted

Under the current ECA, the Site is approved to receive domestic, commercial, non-hazardous solid industrial waste, scrap wood and brush, and iron sludge waste generated from the potable water treatment facility located at Cameco Corporation in Blind River.

Household hazardous wastes are not accepted at the Site but are collected during Household Hazardous Waste days that are held on a regular basis, historically once every 2 years. The last Household Hazardous Waste Day took place in July of 2022.

The Site services a population of approximately 3,450 people along with the area industrial, commercial and institutional (ICI) Sectors. A curb side waste collection program is in place in the Town of Blind River, providing weekly refuse pick-up. The collection programs are run by a private company under contract with the Town. Waste is deposited at the Site by the contractor who collects municipal waste by residential/commercial direct-haul.

1.3 Ownership and Key Personnel

The Town of Blind River owns the Site. Key personnel and their respective contact details are included in Table 1.

TABLE 1:
LANDFILL SITE KEY PERSONNEL

Contact	Contact Details
Town of Blind River - Primary Contact	Chris Zagar Town of Blind River, Director of Public Works 11 Hudson Street, P.O. Box 640 Blind River, ON P0R 1B0 Phone: 705-356-2601 Fax: 705-356-7343 Email: Chris.Zagar@blindriver.ca
Town of Blind River - Secondary Contact	Kathryn Scott Town of Blind River, COA/Clerk 11 Hudson Street, P.O. Box 640 Blind River, ON P0R 1B0 Phone: 705-356-2251 Fax: 705-356-7343 Email: Katie.Scott@blindriver.ca
Blind River Landfill Site Operator	GFL Environmental Inc. 9 Industrial Park Road East Blind River, ON P0R 1B0 Phone: 705-356-4118
Competent Environmental Practitioner	Chris Kresin, M. Sc. (Eng.), P.Eng Kresin Engineering Corporation 536 Fourth Line East Sault Ste. Marie, ON P6A 6J8 Phone: 705-949-4900 Fax: 705-949-9965 Email: info@kresinengineering.ca

1.4 Description and Development of the Waste Disposal Site

Information obtained from Town sources (both written records and verbal accounts) indicates that the landfill site, which services the urban and rural areas of the Town of Blind River, has been receiving municipal wastes since about 1970.

The Site operates under authority of the original ECA No. A7138701 dated November 1980. It stipulates the following conditions:

1. Total site area is 2 ha (further defined by an attached sketch);
2. Site to accept domestic, commercial and “other” (limited to wood scrap and brush) wastes; and
3. C of A to be registered on title.

The original C of A was amended on two (2) occasions;

1. April 1994: added “non-hazardous solid industrial wastes and iron sludge” as allowable wastes for disposal at the Site; and
2. January 2000: added “the use of sawdust as interim cover” for a two (2) year period.

The Site is operated by the Contractor named above, who also provides waste collection services under one contract with the Town. Duties of the landfill site operator include:

1. Collect and dispose of residential municipal waste from curb side;
2. Collect and dispose of commercial and institutional municipal waste as well as waste from municipal parks;
3. Collect and dispose of municipal waste from several 4 and 6 cubic yard tip dumpsters located throughout the Town;
4. Bulldoze waste and apply cover as required by the Town and the Ministry of the Environment, Conservation and Parks;
5. Coordinate the establishment of marshalling areas, designated waste and disposal areas and recycling areas with the site attendant;
6. Designating, signing and maintaining all waste areas in coordination with the site attendant; and
7. Provide monthly reports of volumes of waste collected.

Placement of landfill cover material generally occurs following each day that the Site is operational. The landfill site operator employs a large sheepsfoot landfill compactor to compact waste in-situ, to apply cover material and to shape the Site topography as required.

A landfill attendant is on Site at all times during operating hours in order to observe the work on behalf of the Contractor for the purpose of ensuring the Contractor’s compliance with the Contract. Attendant duties also include:

1. Stop and check all vehicles entering the Site to determine amounts and types of material to be deposited and ensure that waste is deposited in designated areas;
2. Ensure that only waste collected in the Town of Blind River is deposited in the landfill site;
3. Enforce, collect and complete waybills for all applicable landfill tipping fees;
4. Collect data on a daily basis of all volumes and types of material deposited and record same on forms provided by the Town;
5. Ensure that all waste disposed of meets criteria and regulations of the Ministry of the Environment, Conservation and Parks and all other applicable government regulations;
6. Ensure proper backfill procedures are used;
7. Monitor and supervise pest control services; and
8. Perform other duties of a minor nature that may be required from time to time.

Entry to the Site is from the south and fill activities in 2023 occurred in the raised section of the landfill site as well as various piles around the perimeter of the raised section as shown on Drawing B2. An attendant’s shelter and areas to dispose of materials to be diverted are situated at the termination of the main access road, just outside of the approved fill area.

The Site operates as a natural attenuation site, relying on naturally occurring physical, chemical and biological processes to reduce concentrations of contaminants below Ministry of the Environment, Conservation and Parks (MECP) limits prior to reaching the property boundaries of the Site. The Town has used the area fill method of landfilling at the Site, gradually increasing the height of the Site

throughout its operating life. The area of fill ranges in elevation from a high of approximately 213 meters above sea level, at the center of the active fill area, to a low of approximately 200 meters above sea level at the toe of the fill area. The approximate elevation found on the north side of Highway 17 at a grouping of monitoring wells is 191 meters above sea level.

In July 2004 an O&M Plan for the Site was developed. The Plan described the approach to operating the Site such as landfill capacity and waste characterization, surface and groundwater management, landfill development and operations, control and maintenance, monitoring and reporting, contingency plans as well as a closure plan.

A Hydrogeological/Engineering report for the Site was completed in September of 2002 and included in the appendices of the O&M Plan discussed above. The report was completed to address MECP's requirement outlined in a 2002 order issued to the Town that a hydrogeological study be completed. The hydrogeological investigation included monitoring well installation and groundwater sampling in order to determine source leachate strength, leachate transport through the Site and impact of leachate at the property boundary.

Figure 1 presents a conceptual site model of the Site. As stated in the MECP Technical Guidance document, "*A conceptual site model is a three-dimensional picture of site conditions that conveys what is known or suspected about the sources, releases and release mechanisms, contaminant fate and transport, exposure pathways, potential receptors, and risks. The conceptual site model is based on the information available at any given point in time and will evolve as more information becomes available*".

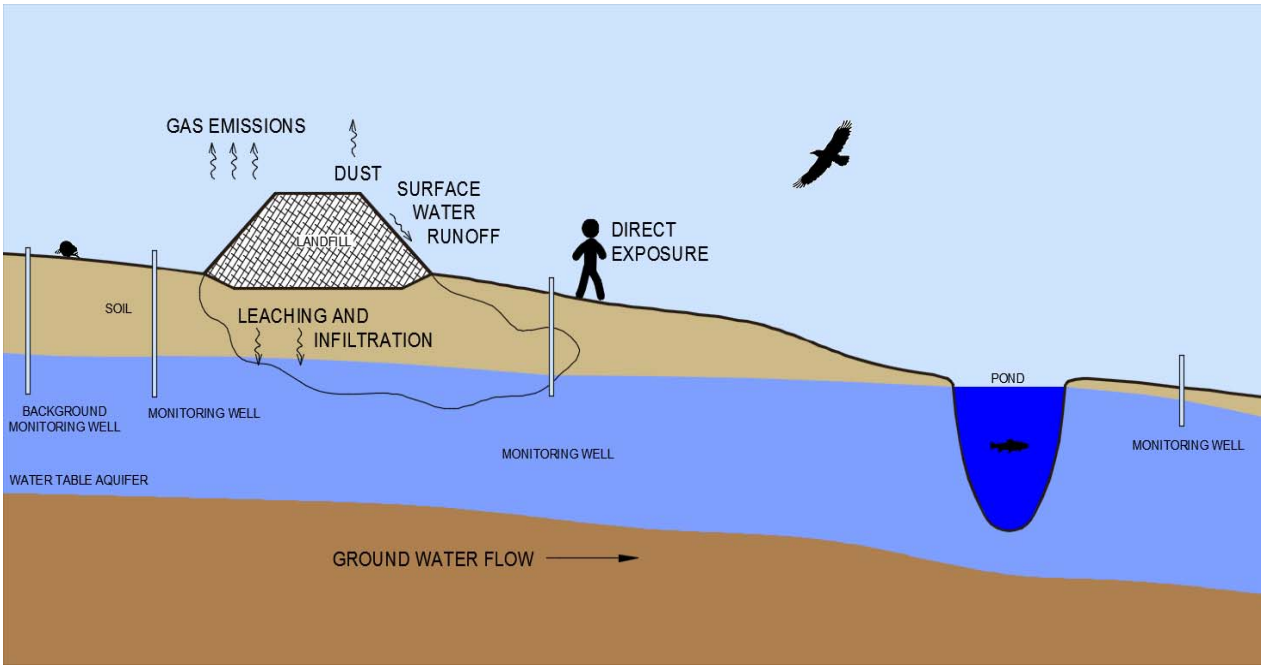

Figure 1 – Conceptual Site Model

1.5 Monitoring and Reporting Program Objectives and Requirements

As stated in the O&M Plan, this report should comply with requirements of Regulation 232/98. Regulation 232/98 "Landfilling Sites" made under the EPA outlines the requirements for Annual Operations Reports for landfill sites in Ontario. The regulation requires that:

> *The owner and the operator of a landfilling site shall ensure that,*
>
> *(a) within three months after each anniversary of the date on which waste was first accepted at the site, an annual report is prepared respecting the operation of the landfilling site, including a summary of results from monitoring programs; and*
> *(b) all of the reports are retained until at least two years after the site is closed.*

Further to the regulation, the MECP Landfill Standard Guideline states that an Annual Operations Report should include the following information:

a. The results and an interpretive analysis of the results of all leachate, groundwater, surface water and landfill gas monitoring, including an assessment of the need to amend the monitoring programs.
b. An assessment of the operation and performance of all engineered facilities, the need to amend the design or operation of the site, and the adequacy of and need to implement the contingency plans.
c. Site plans showing the existing contours of the site; areas of landfilling operation during the reporting period; areas of intended operation during the next reporting period; areas of excavation during the reporting period; the progress of final cover, vegetative cover, and any intermediate cover application; previously existing site facilities; facilities installed during the reporting period; and site preparations and facilities planned for installation during the next reporting period.
d. Calculations of the volume of waste, daily and intermediate cover, and final cover deposited or placed at the site during the reporting period and a calculation of the total volume of site capacity used during the reporting period.
e. A calculation of the remaining capacity of the site and an estimate of the remaining site life.
f. A summary of the quantity of any leachate removed, or treated and discharged, from the site during each operating week, for sites with leachate collection.
g. A summary of the weekly, maximum daily and total annual quantity (by weight where weigh scales are provided at the site, otherwise by estimated volume as received) of waste received at the site.
h. A summary of any public complaints received by the owner and the responses made.
i. A discussion of any operational problems encountered at the site and corrective action taken; and
j. An update of the cost estimate for financial assurance and the amount which has been provided to the Director, in the case of a privately-owned site.

1.6 Assumptions and Limitations

The conclusions and recommendations presented in this report were based on the conditions observed on the specific dates and at the locations described.

While the findings, conclusions and recommendations documented in this report have been prepared in a manner consistent with the level of care and skill normally exercised by the members of the environmental science and engineering profession, this report is neither intended nor is it able to provide a totally comprehensive review of the past or present environmental conditions at the subject property.

2.0 PHYSICAL SETTING

2.1 Geology and Hydrogeology

From the 2002 Hydrogeological Investigation report:

> *"The 8.68 hectare (21.4 acre) landfill is located in a former gravel pit in the Precambrian Shield on the north shore of Lake Huron (north channel). The site is characterized by undulating terrain with relatively thin overburden and occasional rock outcrops. Lakes and poorly drained wetlands are common. Leachate is observed to collect in shallow topographic depressions on the south and east sides of the site."*

Also:

> *"According to the Northern Ontario Engineering Geology Terrain Study (VanDine 1979; Blind River Sheet NTS 41J/SE), local terrain conditions are described as till with ground moraine as the dominant landform (outwash plain is the subordinate landform). Bedrock underlies a drift veneer, local relief is moderate, and terrain is undulating to rolling."*

The area is suspected to have a high water table and the overburden in the area of the Site can be, but is typically not a local source of drinking water. The coarse-grained (sand and gravel) overburden enables the downward flow of water and contaminants and consequently provides limited protection to the overburden aquifer from surface sources of contamination.

The Site is situated in an area of relatively flat topography sloping gradually to the south toward Lake Huron. The terrain to the east and northeast of the landfill site is of higher elevations with the groundwater interpreted as flowing to the northwest, west and south, eventually discharging into Lake Huron.

2.2 Surface Water Features

The fill area is located near a topographic divide from which surface water flows in a southwesterly direction toward Highway 17 and, ultimately, Lake Huron.

Several surface water features are located in the vicinity of the site, including an area approximately 180m southwest of the fill area where surface water pools and has historically been shown to be

leachate impacted expressed groundwater. Additional features at greater distance southwest from the fill area include an excavated pit that likely intercepted the water table and marsh areas adjacent to Highway 17 (north and south of the highway). These features, and others, are included in the monitoring program described in Section 3.0.

3.0 DESCRIPTION OF MONITORING PROGRAM

The Site O&M Plan outlines the monitoring program requirements, as described in the following subsections.

3.1 Monitoring Locations

Groundwater

A groundwater monitoring network consisting of fourteen (14) monitoring wells is currently in-place at the landfill site. Monitoring wells MW1-02, MW2-02, MW3-02, MW4-02, MW5-02 and MW6-02 were installed in May 2002 while MW1-03, MW2-03 and MW3-03 were installed in October 2003. In December of 2015, MW2-03 and MW3-03 were both decommissioned and replaced with two (2) wells, MW2-15 and MW3-15, installed a short distance away from the original locations. MW1-15 and MW4-15 were also installed in 2015, just north of the fill area. MW1-17 and MW2-17 were installed close to King's Highway 17 in July 2017 south of the fill area. MW1-20 was installed in September of 2020 on the south side of King's Highway 17, approximately 370m west of the landfill access road.

Monitoring well locations are shown on Drawing B3 of Appendix B and UTM coordinates for each monitoring well are located in Table 2. Reference elevations for each location are included in Table 3. Copies of borehole logs and a photo inventory of the monitoring wells are included in Appendix C.

TABLE 2: MONITORING WELL LOCATIONS			
Monitoring Well ID	**Zone**	**Northing**	**Easting**
MW1-02	17T	5116863 m	354710 m
MW2-02	17T	5116559 m	354549 m
MW3-02	17T	5116320 m	354311 m
MW4-02	17T	5116302 m	354373 m
MW5-02	17T	5116688 m	354428 m
MW6-02	17T	5116313 m	354304 m
MW1-03	17T	5116320 m	354227 m
MW2-03	17T	5116416 m	354507 m
MW3-03	17T	5116243 m	354657 m
MW1-15	17T	5116691 m	354544 m
MW2-15	17T	5116420 m	354504 m
MW3-15	17T	5116239 m	354656 m
MW4-15	17T	5116709 m	354648 m
MW1-17	17T	5116259 m	354764 m
MW2-17	17T	5116276 m	354482 m
MW1-20	17T	5116246 m	354326 m

Monitoring well conditions and monitoring well construction details are also included in Table 3.

TABLE 3: BLIND RIVER LANDFILL – MONITORING WELL DETAILS								
Monitoring Well ID	**Top of Casing Elevation (m)**	**Well Stick-Up (m)**	**Ground Elevation (m)**	**Total Depth & Elevation (m)**	**Screened Interval & Elevation (m)**	**Well Position**	**Well Condition**	**Hydro-stratigraphic Unit Screened**
MW1-02	199.628	0.919	198.709	5.204 (194.424)	2.156-5.204 (197.472-194.424)	Up-gradient (Background)	Good	Compact silty sand & gravel/Very dense till
MW2-02	200.870	0.702	200.168	6.405 (194.465)	3.357-6.405 (197.513-194.465)	Downgradient (Source)	Good; steel casing needs new lock	Soft alluvium/Soft organics

MW3-15	199.281	0.734	198.547	5.245	2.197-5.245 (197.084-194.036)	Cross-gradient	Good; steel casing needs new lock	Silty sand/ Fine to medium sand/Boulders/Silty sand/Fine to medium sand

TABLE 3:
BLIND RIVER LANDFILL – MONITORING WELL DETAILS

Monitoring Well ID	Top of Casing Elevation (m)	Well Stick-Up (m)	Ground Elevation (m)	Total Depth & Elevation (m)	Screened Interval & Elevation (m)	Well Position	Well Condition	Hydro-stratigraphic Unit Screened
MW4-15	204.329	0.749	203.580	5.464 (198.96)	2.416-5.464 (201.913-198.865)	Cross-gradient	Good	Medium to coarse sand/Silty sand/Fine to medium sand
MW1-17	199.918	0.884	199.034	3.058 (196.860)	1.534-3.058 (198.384-196.860)	Cross-gradient	Good	Cobbles/Gravel/ Fine dry to wet sand
MW2-17	194.786	0.752	194.034	5.147 (189.639)	2.099-5.147 (192.687-189.639)	Downgradient	Good	Medium wet sand
MW1-20	194.915	0.881	194.034	8.325 (186.590)	5.277-8.325 (189.638-186.590)	Downgradient	Good	Silty sand/Wet

- Screened interval lengths and hydrostratigraphic information were taken directly from borehole logs.
- Screened interval depths were calculated using 2015, 2017 and 2020 ground elevations. All remaining information was collected from the 2023 monitoring field logs.
- Total depth (from top of casing) elevations and screened elevations are shown in brackets. Depths are in meters below ground surface.
- Total depth and screened elevations for MW3-02 were taken from the borehole log. Based on current measurements, it is assumed that this well contains a significant amount of material.

Surface Water

In order to assess for potential impacts on surface water in the vicinity of the Site, a surface water sample is collected twice annually from water that pools near the southwest limit of fill (SW1). In 2018, two (2) additional pooling water locations were identified using aerial photography. Both locations are similarly southwest of the fill, directly south (SW2) and west (SW3) of the solar panel field adjacent to the west of the Site. During the 2022 reporting period, areas of surface water ponding located south of the fill area (SW4 and SW5), a background surface water sampling location (SW6) and a downgradient surface water sampling location (SW7) were included as part of the Site's monitoring program.

The surface water locations are shown on Drawing B3 of Appendix B and characteristics of the locations are described in Table 4.

TABLE 4:
SURFACE WATER LOCATIONS

ID	Zone	Northing	Easting	Location Type	Sample Type
SW1	17T	5116445m	354503m	Permanent/Lentic	Downstream
SW2	17T	5116391m	354259m	Permanent/Lentic	Downstream
SW3	17T	5116483m	354146m	Permanent/Lentic	Downstream
SW4	17T	5116466m	354708m	Permanent/Lentic	Downstream
SW5	17T	5116464m	354559m	Permanent/Lentic	Downstream
SW6	17T	5116918m	354748m	Permanent/Lentic	Upstream
SW7	17T	5116288m	353683m	Permanent/Lentic	Downstream

3.2 Monitoring Frequency

Groundwater sampling events have generally occurred twice annually since 2002, the year that the groundwater monitoring network was established, and surface water sampling began in 2004.

3.3 Field and Laboratory Parameters and Analysis

Groundwater

Groundwater samples are collected and analyzed for parameters listed in Column 1 (comprehensive list) and Column 2 (indicator list) of Schedule 5 of the MECP Landfill Standards. Samples collected from MW1-03 (during the fall 2023 sampling event) and MW1-20 were also analyzed for parameters listed under Column 3 of Schedule 5 (surface water comprehensive list) of the MECP landfill standards. In addition to parameters listed in the referenced Schedules, groundwater samples were analyzed for total cyanide, fluoride, organic nitrogen and hardness during the 2023 reporting period.

Pesticides listed under Schedule 24 of Ontario Regulation 170/03 have also been analyzed for periodically during sampling events.

Following their collection, water samples are packaged and shipped for analysis in accordance with instructions from the laboratory.
Field measurements include pH, temperature, dissolved oxygen and conductivity.

Surface Water

Surface water samples are collected and analyzed for parameters listed in Column 3 of Schedule 5 (comprehensive list) of the MECP Landfill Standards. In addition to the parameters listed in the referenced Schedule, surface water samples were also analyzed for dissolved manganese, dissolved zinc, hardness and DOC during the 2023 reporting period.

Field measurements include pH, temperature, dissolved oxygen and conductivity.

3.4 Certificate of Approval Requirements

The current C of A No. A7138701 for the Site does not stipulate monitoring program requirements; therefore, reference is made to ECA No. A-500-7134513066, Regulation 232/98 and the MECP Landfill Standard Guideline document in this regard.

3.5 Monitoring Procedures and Methods

Sample collection is conducted by KEC staff in accordance with KEC's "Groundwater Monitoring and Sampling Protocol", and "Surface Water Monitoring and Sampling Protocol", both attached in Appendix D of this report.

3.6 Standard Operating Procedures

Standard operating procedures followed during the 2023 spring and fall sampling events is attached in Appendix D of this report.

3.7 Record Keeping and Field Notes

All relevant information collected in support of this monitoring report is maintained and kept at the KEC office located in Sault Ste. Marie, ON. Copies of the monitoring well record sheets from the 2023 spring and fall sampling event are included in Appendix E of this report.

3.8 Sampling Methods

Groundwater

Prior to purging, static water levels are measured using a water level tape at each monitoring well location and recorded on a monitoring well record sheet. Water levels and well depth measurements are taken from the top of the PVC casing of each monitoring well. Water levels are recorded prior to removing the dedicated sampling equipment.

Prior to collecting groundwater samples, each monitoring well is purged to remove the stagnant water within the well to allow the sampling of fresh groundwater to occur. Three (3) well casing volumes are removed (or purged dry for slow inflow monitors) using a dedicated inertial lift D-25 foot valve and polyethylene tubing.

Groundwater samples are collected using disposable sampling gloves, dedicated sampling equipment and suitable sample bottles provided by the analyzing laboratory. Depending on the parameter to be analyzed, the appropriate preservative is placed in the bottle by the laboratory prior to shipping. Groundwater samples to be analyzed for metals are field filtered using a 0.45 μm groundwater filter.

Following collection, groundwater samples are placed into coolers with ice, sample identification and chain of custody forms and shipped via local ground transportation services to ALS Environmental located in Thunder Bay, ON for analysis.

Surface Water

Surface water samples are collected using disposable sampling gloves and suitable sample bottles provided by the analyzing laboratory. Similarly to the groundwater samples, depending on the parameters to be analyzed for, the appropriate preservative is placed in the bottles by the accredited laboratory prior to shipping. Samples are collected using a sample bottle (rinsed three times per location) to transfer surface water to laboratory sampling containers. Surface water samples to be analyzed for dissolved metals are field filtered using a 0.45 μm filter

Following collection, surface water samples are placed into coolers with ice, sample identification and chain of custody forms and shipped via local ground transportation services to ALS Environmental located in Thunder Bay, ON for analysis.

3.9 Quality assurance for Sampling and Analysis

The quality assurance and quality control (QA/QC) program includes field duplicates, laboratory prepared trip blanks and field-prepared blanks. In addition, the testing laboratory also implements a QA/QC program that involves spiking blank samples and introducing surrogate compounds at known concentrations for analysis.

A groundwater duplicate sample and field-prepared blank were collected during the May and September 2023 sampling events. A laboratory-prepared trip blank and volatile organic compound (VOC) matrix spike were also included during each sampling event. Blank and duplicate samples are analyzed for parameters listed under Column 1 (spring) and Column 2 (fall) of Schedule 5 or the MECP Landfill Standards.

Ion Balance

Table 5 and 6 present a summary of ion balance calculations completed by the testing laboratory for each monitoring well during the sampling events. Ion balance calculations may be used to evaluate the accuracy of the laboratory's analysis of chemically stable waters by assessing the cation/anion balance within the sample. In the case of landfill leachate, ions do not necessarily balance due to the possible presence of leached metals that may become dissolved in the water samples.

The laboratory uses a series of criteria to assess the accuracy of the analysis, the first being the assessment of the anion sum. Should the anion sum for a sample be less than 3.0 meq/L and the cation sum minus the anion sum is within +/- 0.2 meq/L, the ion balance is considered acceptable. The second criterion involves the assessment of anion sums greater than or equal to 3.0 meq/L. If the anion sum for a sample is greater than or equal to 3.0 meq/L, and the cation sum - anion balance is less than 10%, the ion balance is considered acceptable in stable waters.

TABLE 5: ION BALANCE SUMMARY JUNE 2023					
Sample Location	**Anion Sum <3 meq**	**Anion Sum ≥3 meq**	**Cation Sum (meq)**	**Assessment Criteria**	
				Cation-Anion Sum (for Anions <3 meq)	**Ion Balance (%)**
MW1-02	1.35		1.23	-0.12	
MW2-02		38.9	38.5		-0.52
MW3-02		6.92	6.30		-4.69
MW4-02		4.04	3.74		-3.86
MW5-02	1.26		1.10	-0.16	
MW6-02		7.10	6.91		-1.36
MW1-03		22.7	22.0		-1.56
MW1-15		19.0	20.7		4.28

Bold and shaded values exceed laboratory criteria for ion balance acceptability.

Interference or presence of a non-measured component was noted by the laboratory as potentially causing ion balances to exceed acceptable criteria. It has been noted by the laboratory that significant concentrations of ions (not considered as part of the ion balance calculation) will cause an apparent imbalance within a sample.

3.10 Supplemental Monitoring: Sediment, Benthic and/or Toxicity Monitoring

No supplemental monitoring is conducted at the Site.

3.11 Operational Monitoring

There is currently no operational monitoring (e.g. monitoring of engineered controls) performed at the site.

4.0 OVERVIEW – MONITORING RESULTS

During the 2015 spring sampling event, KEC staff reported that both MW2-03 and MW3-03 were in poor condition and should be decommissioned and replaced with new monitoring wells being installed in the same general locations. Accordingly, two new wells (MW2-15 and MW3-15) were installed in December 2015 along with MW1-15 and MW4-15. Sampling commenced at these locations during the spring 2016 event.

On January 31, 2016 the MECP (Sault Ste. Marie office) forwarded a Technical Support Section Memo produced by an MECP hydrogeologist which contained comments and recommendations based on the review of the 2015 annual monitoring report and 2016 water quality result for the Site. The recommendations included the installation of monitoring wells at a depth that shall intercept the leachate groundwater plume at three (3) locations by March 31, 2018. Accordingly, two new wells were installed on July 12, 2017 onsite south of the historical fill area (MW1-17) and onsite between MW4-02 and MW3-03 (MW2-17). In September of 2020, a monitoring well was installed offsite (across King's Highway 17) south of MW4-02 and MW6-02.

4.1 Historical Data

A summary of historical ranges of selected parameter concentrations for all groundwater and surface water monitoring locations are shown in Table 7.

TABLE 7:
HISTORICAL RANGES OF SELECTED PARAMETERS

Parameter (mg/L)	Iron	Manganese	Alkalinity	Chloride	DOC	pH	TDS

ODWS – Ontario Drinking Water Standards
ND – Not Detected; NT – Not Tested DOC – Dissolved Organic Carbon; TDS – Total Dissolved Solids

4.2 Data Quality Evaluation

The groundwater and surface water analyses were completed by ALS Environmental in Thunder Bay, Ontario. The laboratory is accredited to ISO/IEC 17025:2005 (E). Certificates of analysis from the accredited laboratory are included in Appendix F for the current reporting period.
QA/QC data was assessed by calculating the relative percent difference (RPD) for field duplicate samples. A field duplicate was collected at MW2-17 during the spring and fall sampling events. Parameter concentrations for the duplicates were found to be similar to the original, with the exception of those summarized in Table 8 below. Parameter concentrations greater than or equal to 5 times the laboratory method detection limit (MDL) with a RPD of less than or equal to 20 percent (between original and duplicate sample) were deemed acceptable. Parameter concentrations less than or equal to

5 times the MDL with a concentration difference less than or equal to the MDL were deemed acceptable.

TABLE 8:
QUALITY ASSURANCE/QUALITY CONTROL EVALUATION

Monitoring Location	Sampling Event	Parameter	QA/QC Evaluation	
			Parameter Concentration ≥5x MDL and RPD > 20%	Parameter Concentration <5x MDL and Difference >MDL
MW2-17	Spring 2023	TSS	✘	
		TDS	✘	
		DOC	✘	
MW2-17	Fall 2023	TSS	✘	
		DOC	✘	

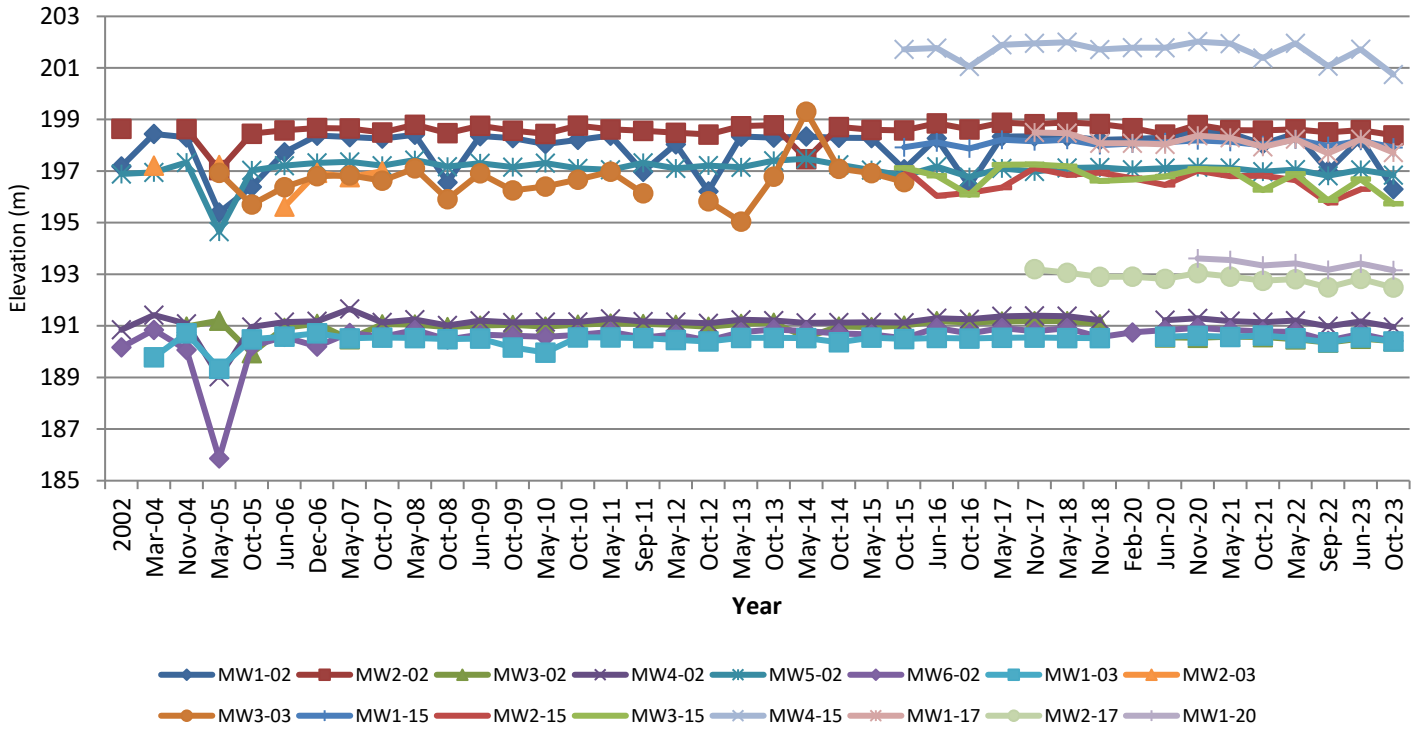
TSS – Total Suspended Solids; TDS – Total Dissolved Solids; DOC – Dissolved Organic Carbon

Results not satisfying the requirements of the QA/QC evaluation should be interpreted with caution. Regarding the evaluation results shown in Table 8, it is generally understood and accepted that the variability of field sample duplicates is significantly more than what is observed with Laboratory Sample Duplicates.

4.3 Groundwater Flow Monitoring

Water levels appear to be relatively stable historically. In cases it appears that groundwater levels determined during different seasons (spring/fall) show the effects of drought/wet conditions at or prior to the time of the sampling events. Water levels are presented graphically in Chart 1 and in Table G.24 attached in Appendix G of this report.

Chart 1
Town of Blind River Landfill Site
Groundwater Elevations



Drawings B4, B5 and B6 of Appendix B presents the water table profiles developed as well as interpreted groundwater contours based on water tables elevations established during the 2023 spring and fall sampling events. Groundwater contours, interpreted for both 2023 sampling events suggest that flow is to the northwest, west and southwest.

4.4 Groundwater Quality Monitoring

A review of the groundwater quality data summarized in Table G.1 through G.16 (Appendix G) reveals that Ontario Drinking Water Quality Standards (ODWS) are commonly exceeded for iron, manganese and DOC in most wells including MW1-02 (background well).

1. Samples from MW2-02 (source well) have historically contained volatile organic compounds (VOCs) including: benzene, toluene (2002 and June 2006), 1,4-dichlorobenzene and chlorobenzene. During the 2021 spring and fall sampling events, benzene was detected above ODWS and 1,4-dichlorobenzene was detected below ODWS. Pesticides (carbaryl and benzo(a)pyrene) have been detected historically at this location but at levels below ODWS.

2. The pesticide carbaryl was detected at boundary well MW4-02 in October 2005.

3. Benzo(a)pyrene was detected at boundary well MW6-02 in October 2005 along with benzene at MW1-03 during the same sampling event.

4. Pesticides did not exceed ODWS during any sampling event from 2006-2008 and 2012, therefore analysis for these parameters has not been carried out since.

Parameters exceeding ODWS during the 2023 reporting period are presented in Table 9.

Table 9: Summary of Review of 2023 Analytical Data

Location	Parameters Exceeding ODWS	
	Spring	Fall
MW1-02	None	None
MW2-02	Alkalinity, Chloride, Iron, Manganese, Sodium, TDS, DOC, Benzene	Alkalinity, Chloride, Iron, Manganese, Sodium, TDS, DOC, Benzene
MW3-02	Manganese, DOC	Manganese, DOC
MW4-02	Iron, Manganese, DOC	Iron, Manganese, DOC
MW5-02	None	None
MW6-02	Iron, Manganese, DOC	Iron, Manganese, DOC
MW1-03	Chloride, Iron, Manganese, Sodium, TDS, DOC	Chloride, Iron, Manganese, Sodium, TDS, DOC
MW1-15	Alkalinity, Iron, Manganese, TDS, DOC	Alkalinity, Iron, Manganese, TDS, DOC
MW2-15	None	Dry

MW2-17	None	None
MW1-20	Chloride, Iron, Manganese, Sodium, TDS, DOC	Chloride, Iron, Manganese, Sodium, TDS, DOC

4.4.1 Reasonable Use Assessment

MECP's Reasonable Use policy applies to groundwater at property boundaries and typically to parameters with aesthetic and health-related concentrations in the ODWS. The calculation of Reasonable Use (RU) concentrations is developed based on the relationship:

$$C_m = C_b + x(C_r - C_b)$$

where: C_m is the maximum allowable concentration at the property boundary;
C_b is the background concentration;
C_r is the ODWS concentration; and,
x is a factor - 0.5 for aesthetic parameters, and 0.25 for health-related parameters.

The RU concentrations are developed to assess the potential impact to groundwater beneath adjacent properties. As such, monitoring wells are typically located downgradient from and near property boundaries.

RU concentrations were developed using MW1-02 as the background well, for parameters for which ODWS have been established and that are identified in Schedule 5 (Column 1 – comprehensive list) of the MECP's Landfill Standards. The Standards state that the background concentration of a contaminant in groundwater is the median value of a minimum of 5 samples collected from a location not impacted by human activity. The RU concentrations were developed using the sampling results from 20 sampling events (spring), 19 sampling events (fall) and 1 sampling event (winter) at the background monitor (MW1-02).

A summary of parameters exceeding RU concentrations during the 2023 spring and fall sampling events is presented in Table 10.A. Groundwater RU exceedances for the 2023 sampling events are tabulated graphically on Drawing B7 of Appendix B.

TABLE 10.A:
PARAMETERS EXCEEDING RU CRITERIA IN 2023

Monitoring Location	May 2023	October 2023
MW1-02 – Background	DOC	None
MW2-02 – Source	Alkalinity, Barium, Boron, Chloride, Iron, Manganese, Sodium, TDS, Benzene, DOC	Alkalinity, Barium, Boron, Chloride, Iron, Manganese, Sodium, TDS, Benzene, DOC
MW3-02 – Boundary	Manganese, pH, TDS, DOC	Manganese, pH, TDS, DOC
MW4-02 – Boundary	Iron, Manganese, DOC	Iron, Manganese, DOC
MW5-02 – Intermediate	None	None
MW6-02 – Boundary	Iron, Manganese, TDS, DOC	Iron, Manganese, pH, DOC
MW1-03 – Boundary	Barium, Chloride, Iron, Manganese, Sodium, TDS, DOC	Barium, Chloride, Iron, Manganese, Sodium, TDS, DOC
MW1-15 – Intermediate	Alkalinity, Arsenic, Boron, Iron, Manganese, TDS, Benzene, DOC	Alkalinity, Boron, Iron, Manganese, TDS, DOC
MW2-15 – Intermediate	pH	NA
MW3-15 – Boundary	Iron, Manganese	Iron, Manganese, pH
MW4-15 – Intermediate	Iron, Manganese	Iron, Manganese, pH
MW1-17 – Boundary	Iron, Manganese, DOC	Iron, Manganese, DOC
MW2-17 – Boundary	None	None
MW1-20 - Boundary	Barium, Chloride, Iron, Manganese, Sodium, TDS, DOC	Barium, Chloride, Iron, Manganese, Sodium, TDS, DOC

Health-related parameters that were identified as having exceeded the RU Criteria during the spring and fall sampling events were barium, boron and benzene at MW2-02 (source well) and barium at MW1-03 and MW1-20. MW1-15 also exceeded RU Criteria for arsenic, boron and benzene during the spring sampling event and for boron during the fall sampling event.

Table 10.B presents a summary of RU concentrations and analytical results for the parameters identified in Schedule 5 (Column 1 – comprehensive list) of the MECP's Landfill Standards for the spring 2023 sampling event.

Table10.C presents a summary of RU concentrations and analytical results for the parameters identified in Schedule 5 (Column 2 – indicator list) of the MECP's Landfill Standards for the fall 2023 sampling event.

Groundwater quality trending charts are included in Appendix H. Concentrations of critical contaminants such as vinyl chloride and toluene, were only analyzed for at the source well and were found at levels that are orders of magnitude less than the RU Criteria established using historical data. Chloride which is considered a critical contaminant exceeded RU Criteria at the source well during the 2023 spring and fall sampling events.

With respect to the parameters identified in Tables 9.A as exceeding RU criteria:

1. With reference to the analytical results summarized in Tables G.1 to G.16, alkalinity is found to generally vary linearly (increase) with bicarbonate and calcium levels. Leachate related process that may increase alkalinity include the dissolution of calcium carbonate and the introduction of carbon dioxide through the decomposition process. Alkalinity may be a reliable leachate indicator parameter in this case.

2. Barium and boron can be found in groundwater and/or surface water due to leaching and erosion of sedimentary rocks if present beneath the sampled area. Both barium and boron are health-related parameters and in some cases can be reliable indicators of leachate-related impacts from landfill activities in sampled groundwater and/or surface water. Barium and boron appear to be elevated at MW2-02 (source well) during the spring and fall sampling events but not at MW1-02 (background monitor), therefore these parameters may be reliable indicators in this case.

3. Arsenic is released naturally from bedrock and soil with the process being enhanced by human activity, such as landfilling. Arsenic is a health-related parameter and in some cases can be a reliable indicator of leachate-related impacts from landfill activities in sampled groundwater and/or surface water. Arsenic appears to be elevated at MW1-15 during the spring sampling event but not at the background well MW1-02. Accordingly, arsenic may be a reliable indicator in this case.

4. Chloride is considered a critical contaminant and can be used as a reliable indicator of leachate impact on groundwater and/or surface water. In this case, chloride may be a reliable indicator, however, as exceedances are shown in boundary monitors MW1-03 and MW1-20 located adjacent to the Highway, impacts may also be related to winter highway salting activities.

5. Iron and manganese are usually present in landfill leachate, either waste derived or dissolved from soil particles, and are often mobile under anaerobic conditions, such as those typically present near landfills. Where natural background levels are elevated (in comparison to ODWS), these parameters are not reliable indicators. Data from the background monitor (MW1-02) reveals that iron and manganese have historically exceeded ODWS, however, these parameters

did not exceed ODWS during the 2023 sampling events.

6. Sodium is often found naturally in groundwater. Elevated levels may be natural or caused by the infiltration of surface water contaminated by road salt or landfill leachate. Sodium does not appear to be naturally elevated in water samples collected from the background monitoring well, therefore, it may be a reliable indicator in this case.

7. Total Dissolved Solids is a measure of the quantity of dissolved material in water and can provide an indication of general impact. Review of the analytical results reveals that chemical constituents are generally present at higher levels in down gradient wells with higher TDS than in MW1-02.

8. Benzene is a volatile hydrocarbon that can generally be found in petroleum products such as gasoline. When benzene is identified in landfill leachate, it is usually waste derived. Historical data from the background monitor (MW1-02) reveals concentrations below ODWS.

9. DOC is an indicator of the presence of organic matter/chemicals in leachate. DOC appears to be naturally elevated in historical water samples collected from the background monitoring well. Accordingly, DOC may not be a reliable indicator in this case.

Table 10.B presents a summary of RU concentrations and analytical results for the parameters identified in Schedule of the MECP's Landfill Standards for the 2023 spring sampling event.

TABLE 10.B: SUMMARY OF RU CRITERIA AND ANALYTICAL RESULTS – JUNE 2023

4.4.2 Geochemical Facies

Median concentrations of major ions were calculated using historical data for each groundwater monitoring location. A Piper diagram (Figure 2) was developed in order to identify waters which are geochemically similar in composition and thus may be identified as being from the same source or as being impacted by the same anthropogenic activity (e.g. landfilling). The ions used to develop the Piper diagram are: chloride, magnesium, sodium, potassium, calcium, sulphate, carbonate and bicarbonate. Data is available for each ion at each monitoring well.

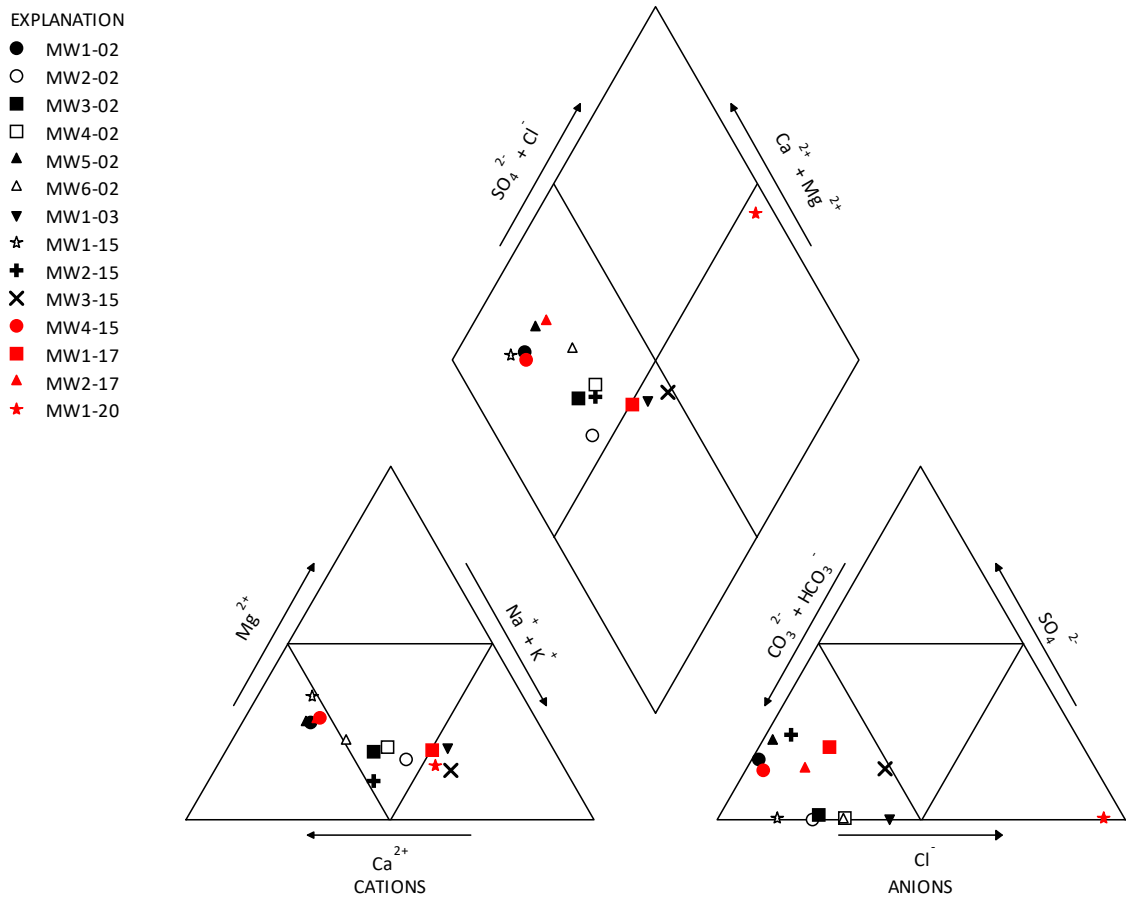

Figure 2: Monitoring Well Piper Diagram

The central diamond of the Piper diagram reveals a calcium-bicarbonate type grouping of wells similar to the source monitor (MW2-02) and a grouping similar to the background well (MW1-02). Three wells display either mixed water types, with one (MW1-20) clearly chloride type.

Similarly to historical reports, the clustering and relative positions of the data points shown on the Piper diagram suggests that the leachate impacted groundwater progressing in a southwesterly direction may be constrained between MW1-03 and MW3-15. The possible impact of highway salting on wells adjacent to the highway (especially MW1-20) is also revealed.

4.4.3 Leachate Characterization

Landfill leachates are typically strong, having TDS levels in the thousands of mg/L and complex mixtures of numerous contaminants that may have either leached from waste material or formed as a result of related reactions/processes. TDS levels at the Site have historically been shown to range from a low of 28mg/L at MW2-15 to a high of 2,580mg/L and MW2-02 (source well).

Representative ranges of typical contaminants found in landfill leachate are presented in Table 11.A, along with median values encountered at each of the monitoring well locations. The representative ranges in the table are associated with mature landfill sites (greater than 10 years old).

TABLE 11.A: COMPARISON OF MEDIAN MW CONCENTRATIONS TO RANGES OF TYPICAL LEACHATE PARAMETERS

Notes:
1. *Representative Ranges from "Integrated Solid Waste Management, Tchobangolous,1993".*
2. *Representative Range for TDS from "The Fate of Landfill Leachate in Waste Water Treatment Plants and in Groundwater at Attenuation Landfills, MOEE, 1994"*
3. *ND- Not Detected, NT- No Test, NP – Not Provided*
4. *Bolded and shaded values fall within or above the representative range*

Review of the data in Tables 11.A, 11.B and 11.C coupled with the observed TDS levels, suggests that the landfill is producing moderately strong leachate.

4.5 Surface Water Quantity Monitoring

Surface water flow measurements are not taken as part of the annual sampling events.

4.6 Surface Water Quality Monitoring

The surface water monitoring program evaluates the potential that landfill leachate and/or surface runoff from the Site may be impacting down gradient surface waters.

Previous assessments have concluded that:

1. Historic monitoring results for surface water samples collected southwest of the waste disposal site have demonstrated consistent water quality since 2004.

2. PWQO are commonly exceeded at SW1 (formerly SW) for boron, iron, zinc and phenols. PWQO have historically been exceeded for boron, iron and phenols at SW2 and SW4 and for iron and phenols at SW3, SW5, SW6 (background) and SW7.

Analytical results are summarized in Tables G.17 to G.19 of Appendix G and copies of laboratory certificates of analysis are presented in Appendix F. Surface water quality trends are also included in Charts H.7 – H.10 of Appendix H. The data in Table 12.A to 12.D presents a comparison of concentrations of surface water constituents to PWQO, Canadian Water Quality Guidelines (CWQG) and criteria listed under MECP's *Table A: Assessment Criteria for Waste Disposal Sites, Monitoring and Reporting for Waste Disposal Sites, Groundwater and Surface Water – Technical Guidance Document, 2010 (*AAC). The following observations are made on review of the results.

June 2023

- PWQO was exceeded for boron, iron, total phosphorus and phenols at SW1, SW2 and SW4; for iron, total phosphorus and phenols at SW6; for iron and total phosphorus at SW7; for lead at SW4 and SW7, and for copper, cadmium and zinc at SW7.
- AAC were exceeded for iron at SW1 and SW4 and for chloride and copper at SW7.
- CWQG were exceeded for un-ionized ammonia at SW1 and SW4; for nitrite at SW1; for iron at SW1, SW2, SW4, SW6 and SW7; for cadmium at SW4; and, for cadmium, chloride, copper, lead and zinc at SW7.

August 2023

- PWQO were exceeded for boron, iron and total phosphorus at SW2 and SW4; for iron, lead and total phosphorus at SW6 and SW7; for arsenic, cadmium, copper at SW7; for zinc at SW4 and SW7; and, phenols at SW4, SW6 and SW7.
- AAC were exceeded for un-ionized ammonia at SW4; for iron at SW4 and SW6; for cadmium, chloride, copper, lead and zinc at SW7.
- CWQG were exceeded for un-ionized ammonia and zinc at SW4; iron at SW2. SW4, SW6 and SW7; for lead at SW6 and SW7; and, for cadmium, chloride, copper and zinc at SW7.

September 2023

- PWQO were exceeded for boron, iron and total phosphorus at SW1, SW2 and SW4; for iron and total phosphorus at SW7; for lead, copper and zinc at SW4 and SW7; for cadmium at SW7; and for phenols at SW2, SW4 and SW7.
- AAC were exceeded for iron and lead at SW4; and, for cadmium, chloride, copper and zinc at SW7.
- CWQG were exceeded for un-ionized ammonia at SW1 and SW4; for iron at SW1, SW2, SW4 and SW7; for nitrite at SW1; for phenols at SW6; and, for cadmium, chloride, copper, lead and zinc at SW7.

October 2023

- PWQO were exceeded for boron, iron and total phosphorus at SW1, SW2 and SW4; for total phosphorus at SW6; for iron and total phosphorus at SW7; for cadmium, lead, copper and zinc at SW4; and, for phenols at SW1, SW2 and SW4.
- AAC were exceeded for iron at SW1 and SW4; for un-ionized ammonia, copper and lead at SW4; and, for chloride and iron at SW7.
- CWQG were exceeded for un-ionized ammonia at SW1 and SW4; for iron at SW2, SW4 and SW7; for cadmium, copper, lead and zinc at SW4; and, for chloride at SW7.

Surface water PWQO exceedances for the 2023 sampling events are tabulated graphically on Drawing B8 of Appendix B.

TABLE 12.A: SELECTED SURFACE WATER QUALITY DATA COMPARED WITH PWQO – JUNE 2023

Parameter	PWQO	Alternative Assessment Criteria	Units	Sampling Location and Concentration

ND – Not Detected; NT – Not Tested

4.7 Gas Pressures and Composition

Gas pressures and composition data is not currently collected at the Site.

4.8 Supplemental Monitoring

No supplemental monitoring is performed at the Site.

4.9 Control Systems Monitoring

The current environmental control systems in place at the Site are the application of cover material as well as proper grading of the fill area of the landfill.

5.0 ASSESSMENT, INTERPRETATION AND DISCUSSION

Section 5.0 provides an assessment, interpretation and discussion regarding the potential impact from the landfill on groundwater and surface water features considering information collected during the 2022 groundwater and surface water sampling program, as well as a review of historical data. The effectiveness of the monitoring program, remedial measures in place, site features, control measures/systems in place and operating conditions at the landfill site are also assessed.

5.1 Groundwater Flow Interpretation

Interpretations presented in previous assessments indicate that groundwater within the overburden aquifer at the Site flows toward the northwest and southwest, eventually discharging into Lake Huron. Groundwater contours interpreted from water table elevations determined during the 2023 spring and fall sampling events are shown on Drawings B5 and B6, of Appendix B. The 2023 contours support the historical interpretations regarding groundwater flow direction; it is suspected that a groundwater divide restricts flow in the northwesterly and westerly directions.

Goffco Limited identified a hydraulic conductivity (K) of $1.0x10^{-6}$ m/s (clean sand) in their 2003 report titled “Hydrogeological Investigation – Town of Blind River Landfill”. The porosity of the soils is assumed to be in the range of 30% based on previous hydrogeological assessments on similar material.

Based on the identified hydraulic conductivity and porosity, an estimated lateral gradient for the Site was developed in order to calculate groundwater flow velocities for the spring and fall sampling events. Drawing B4 of this report was referenced in order to determine the groundwater gradient according to the 2023 spring and fall sampling events.

For the spring sampling event, the hydraulic gradient between MW2-02 and MW6-02 was calculated to be 0.025 m/m. Using the identified hydraulic conductivity and porosity, the estimated groundwater flow velocity was calculated to be 2.67 meters/year (m/yr). Gradient and velocity values associated with the fall sampling event are 0.026 m/m and 2.69 m/y.

At the vertical gradient of 0.03 observed during the fall 2023 sampling event at the nested monitoring well locations MW3-02 and MW6-02, the groundwater velocity was determined to be 0.04 m/yr at a hydraulic conductivity of 1 order of magnitude less than that used for the lateral gradient calculation.

At the calculated horizontal and vertical groundwater velocities, precipitation (or leachate) reaching the underlying groundwater system is expected to travel for decades before reaching the Highway 17 right-of-way (ROW) and eventually discharging to Lake Huron.

5.2 Groundwater and Surface Water Quality

The Tables in Appendix G present summaries of analytical results from analyses of the groundwater and surface water samples collected during the reporting period and previous years. ODWS and PWQO are noted where they exist. The comments below have been developed following review of the latest set of groundwater and surface water analytical data.

1. The Site appears to be producing moderately strong leachate;

2. During the spring sampling event, no parameters exceeded ODWS at MW1-02 (background). RU criteria was exceeded for DOC at this location during the spring sampling event;

3. ODWS were exceeded for alkalinity, chloride, iron, manganese, sodium, TDS, DOC and benzene at MW2-02 (source) during the spring and fall sampling events. RU concentrations were also exceeded for alkalinity, barium, boron, chloride, iron, manganese, sodium, TDS, benzene and DOC during the spring and fall sampling events;

4. PWQO were exceeded during the June sampling event for boron (SW1, SW2, SW3), iron (all sampled surface water sampling locations) total phosphorus (all sampled surface water locations), phenols (SW1, SW2, SW4, SW6), lead (SW4, SW7), copper (SW7), cadmium (SW7) and zinc (SW7);

5. AAC were exceeded during the June sampling event for iron (SW1, SW4), chloride (SW7) and copper (SW7);

6. CWQG were exceeded during the June sampling event for un-ionized ammonia (SW1, SW4), nitrite (SW1), cadmium (SW4), cadmium (SW7), chloride (SW7), copper (SW7), lead (SW7 and zinc (SW7);

7. PWQO were exceeded during the August sampling event for boron (SW2, SW4), iron (all sampled surface water locations), total phosphorus (all sampled surface water locations), lead (SW6, SW7), arsenic (SW7), cadmium (SW7), copper (SW7) and zinc (SW7) and phenols (SW4, SW6, SW7).

8. AAC were exceeded during the August sampling event for un-ionized ammonia (SW4), iron (SW4, SW6), cadmium (SW7), chloride (SW7), copper (SW7), lead (SW7) and zinc (SW7);

9. CWQG were exceeded during the August sampling event for un-ionized ammonia (SW4), zinc (SW4, SW7), lead (SW6, SW7), cadmium (SW7), chloride (SW7) and copper (SW7);

10. PWQO were exceeded during the September sampling event for boron (SW1, SW2, SW4), iron (SW1, SW2, SW4, SW7), total phosphorus (SW1, SW2, SW4, SW7), lead, (SW4, SW7), copper (SW4, SW7), zinc (SW4, SW7), cadmium (SW7) and phenols (SW2, SW4, SW7);

11. AAC were exceeded during the September sampling event for iron (SW4), lead (SW4), cadmium (SW7), chloride (SW7), copper (SW7) and zinc (SW7);

12. CWQG were exceeded during the September sampling event for un-ionized ammonia (SW1, SW4), nitrite (SW1), phenols (SW6), cadmium (SW7), chloride (SW7), copper (SW7), copper (SW7), lead (SW7) and zinc (SW7);

13. PWQO were exceeded during the October sampling event for boron (SW1, SW2, SW4), iron (SW1, SW2, SW4, SW7), total phosphorus (SW1, SW2, SW4, SW7), cadmium (SW4), lead (SW4), copper, (SW4), zinc (SW4) and phenols (SW1, SW2, SW4).

14. AAC were exceeded during the October sampling event for iron (SW1, SW4, SW7), un-ionized ammonia (SW4), copper (SW4), lead (SW4) and chloride (SW7);

15. CWQG were exceeded during the October sampling event for un-ionized ammonia (SW1, SW4), cadmium (SW4), copper (SW4), lead (SW4), zinc (SW4) and chloride (SW7).

16. SW3 and SW5 were dry during the 2023 spring and fall sampling events;

17. Water quality of SW1, located southwest of the fill area and SW4, located south of the fill area appear to have been impacted by leachate throughout the period that data is available.

18. Water quality monitoring should continue to be carried out four times annually, as required under ECA No. A-500-7134513066.

Groundwater and surface water quality trend plots are included in Appendix H of this report. While no significant trends are apparent in data from individual monitoring wells:

1. Concentrations of iron and manganese are typically higher at MW4-02, MW6-02, MW1-03, MW1-17 and MW1-20;

2. Concentrations of DOC, TDS and chloride are typically greatest at MW1-03, followed by MW6-02 and MW4-02. Although data is limited, concentrations of these parameters appear to be similar to or greater at MW1-20 than those observed at MW1-03;

3. With the exception of the fall 2020 sampling event where MW1-02 shows elevated levels of certain parameters, for reasons unknown, MW1-02 and MW5-02 consistently plot as the lowest concentrations for the selected parameters mentioned above.

5.2.1 Leachate Generation Rate

It is anticipated that, locally, the entire water surplus would infiltrate into the groundwater system. Based on an annual infiltration of 250mm (per MECP guidance) through 2.0 hectares (approved fill area), it is estimated that 13.7m^3/day of leachate may be produced at the Site.

5.3 Waste Disposal Site Gas impacts

Landfill gas is not currently monitored; however, it is expected that the anticipated small quantities of methane gas produced will not impact adjacent properties. The existing cover at the Site does not show signs of failure. There appears to be ample vegetation growth on all outer slopes as well as historic dumping areas within the current landfill.

5.4 Effectiveness of Engineered Controls

There are no engineered control systems currently in place at the Site.

5.5 Adequacy of the Monitoring Program

The groundwater and surface water monitoring program appear to adequately characterize current conditions at the Site, however, to further assess the extent of leachate migration, the Town has been corresponding with the MECP regarding additional monitoring locations.

5.6 Assessment of the Need for Implementation of Contingency Measures

A trigger mechanisms and contingency plan is currently being finalized for the Site, however, to further assess the results from the analysis of groundwater collected at the site, a list of trigger parameters and concentrations was developed starting in 2015 and continued during the 2023 reporting period.

5.6.1 Trigger Mechanisms Assessment

A list of groundwater trigger parameters was established as being those parameters where the ratio between the median concentrations in leachate and background water quality is 10 or greater. The source (leachate) monitor constructed at the Site is identified as MW2-02 while the background monitor is identified as MW1-02. The ratios of concentrations in groundwater from these two (2) active monitoring wells were determined in identifying the trigger parameters (as shown in Tables 12.A and 12.B).

Site-specific groundwater trigger concentrations, developed based on MECP's RU Policy were established for each of the trigger parameters identified in Table 13.A and 13.B, as the 75th percentile RU values. The trigger concentrations were calculated using the 10 most recent sampling results. The trigger concentrations are also shown in Table 13.A and 13.B.

The assessment of groundwater trigger mechanisms reveals:

1. Trigger concentration for DOC was exceeded at MW3-02, MW4-02, MW6-02, MW1-03, MW1-15, and MW1-17 and MW1-20 during the 2022 spring and fall sampling events. DOC also exceeded trigger concentrations at MW3-15 during the spring sampling event;

2. During both spring and fall sampling events, iron exceeded trigger concentrations at MW4-02, MW1-03, MW1-15, MW3-15, MW4-15, MW1-17 and MW1-20. Tigger concentrations for iron were also exceeded at MW3-02 during the spring sampling event;

3. MW1-03 and MW1-20 exceeded trigger concentrations for chloride, barium and sodium during the spring and fall sampling events; and,

4. Alkalinity exceeded trigger concentrations at MW1-15 during the spring and fall sampling events and at MW3-02 during the fall sampling event.

As proposed in the Site's Trigger Mechanism and Contingency Plan, in addition to the assessment described above, groundwater quality near the point of discharge to surface water (MW1-20) was assessed considering compliance with background concentrations as well as PWQO or the CWQG, whichever is more recently published (as shown in Table 14).

To address the noted trigger concentration exceedances, the Town is pursuing the establishment of a contaminant attenuation zone (CAZ).

TABLE 13.A: GROUNDWATER TRIGGER MECHANISM ASSESSMENT

* Dependent on hardness value (mg/L as CaCO3); Metals reported for MW1-20 and MW1-03 are total metals (mg/L)
ND – Not Detected; NT – Not Tested
Bold and shaded values exceed trigger
Trigger parameters are those described in Schedule 3 or the ECA; Trigger values are considered PWQO/CWQG values.

During the spring and fall sampling events, trigger concentrations were exceeded at MW1-20 for chloride, arsenic, cadmium, copper, iron, lead and zinc. Trigger concentrations were also exceeded for total phosphorus during the spring sampling event. During the spring and fall sampling events, trigger concentrations were exceeded for chloride at MW1-03. MW1-03 also exceeded trigger concentrations for total phosphorus during the spring sampling event and boron, cadmium, copper, iron and lead during the fall sampling event.

5.6.2 Surface Water Trigger Assessment

A list of surface water trigger parameters was established as those parameters listed under Column 3 or Schedule 5 of the MECP Landfill Standards.

As specified in the Trigger Mechanisms and Contingency Plan developed for the site, trigger concentrations are equivalent to the 75th percentile values calculated using the 10 most recent background surface water quality sample results from the upstream sampling locations (SW6). As data is only available for two sampling events at SW6, trigger concentrations may not accurately represent background conditions.

Established trigger concentrations for the 2023 reporting period are shown in Tables 15.A, 15.B, 15.C and 15.D.

TABLE 15.A: SURFACE WATER TRIGGER MECHANISMS ASSESSMENT –JUNE 2023

Bold and shaded values exceed trigger concentrations.

5.6.3 Contingency Measures

Monitoring wells assessed to-date are intermediate wells in close proximity to the fill area, rather than CAZ boundary wells. In accordance with direction from the MECP, the Town has initiated the process to formally establish a CAZ. The Town has also submitted an easement application with MTO requesting that groundwater beneath the Highway 17 ROW be incorporated into the CAZ.

In accordance with ECA A-500-7134513066, the Town is also constructing improvements to site and local area surface water management facilities. This includes addressing suspected leachate seeps.

6.0 ADDITIONAL ANNUAL REPORTING REQUIREMENTS

Section 1.4 of this report outlines the annual reporting requirements for the Town of Blind River Municipal landfill site. The following subsections address the two requirements not addressed earlier in this document.

6.1 Site Plan – 2023 Contours and Areas of Operation

Drawing B2 in Appendix B depicts the following information as per the requirements reproduced in Section 1.4 of this report:

1. 2023 contours and facilities;
2. Areas of landfilling activity (2023 and intended for 2024); and,
3. Progress of final cover.

6.2 Site Capacity

A topographic survey was completed on October 5, 2023 in order to estimate the in-situ waste volume. A contour plan of the active landfill area was completed based on this survey (Drawing B2 in Appendix B) and was subsequently compared to a site survey conducted on November 2, 2022. The comparison indicates that during this period, approximately 3,302 m^3 of waste and cover material were deposited within the approved fill area. This equates to an annual disposal rate of approximately 3,566 m3/year.

Available site capacity was determined by overlaying the anticipated final contours over the October 2023 survey to consider how the Site is being shaped while accounting for consolidation of the fill. The final contours promote drainage to reduce volume of leachate formed, resulting in a pyramidal shaped-mound. A remaining volume of roughly 1,758 m^3 was determined in this manner.

Using the annual disposal rate of 3,566 m^3/year, Site capacity may be reached during the spring of 2024. A summary of these calculations is presented in Appendix I.

Table 16 presents a summary of estimated volumes deposited at the landfill site during the reporting period and Chart 2 provides a summary of calculated disposal rates from 2002 to 2023. Chart 3 presents the estimated year of closure when applying the average historical disposal rates to the estimated remaining capacity.

TABLE 16: VOLUME SUMMARY 2023

Component	Estimated Volume (m^3)
Total Volume	3,302
Daily Cover Material	660*
Final Cover	0
Waste	2,642

* Volume of Daily Cover Material estimated as 20% of Total Volume.

Chart 2
Blind River Landfill Site
Historical Disposal Rates

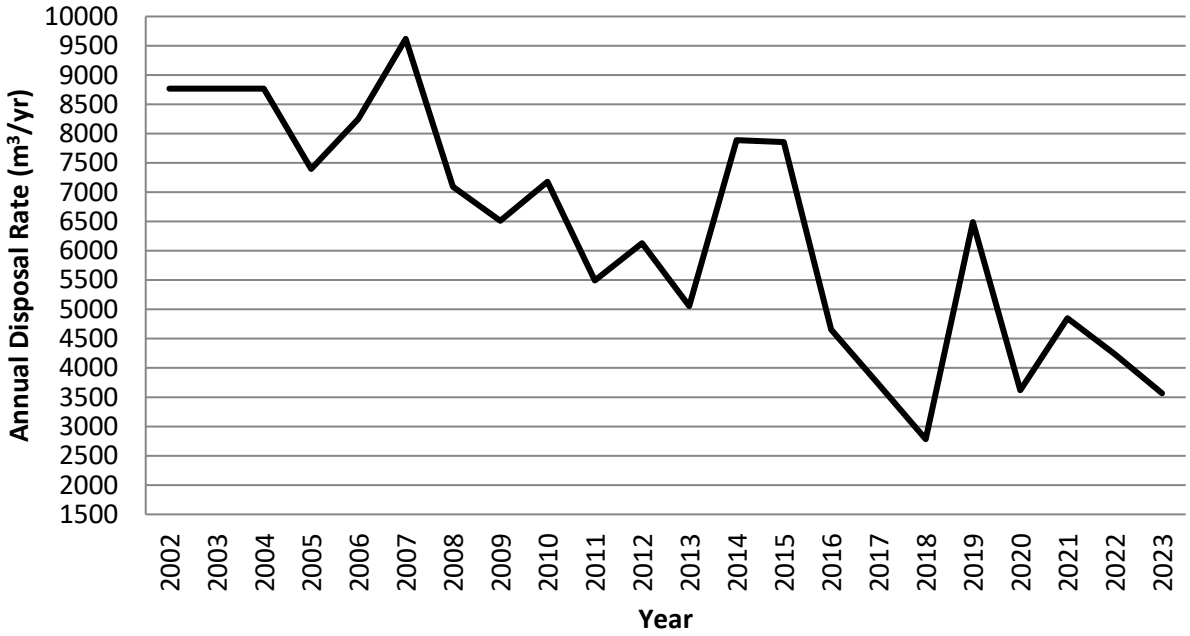

Chart 3
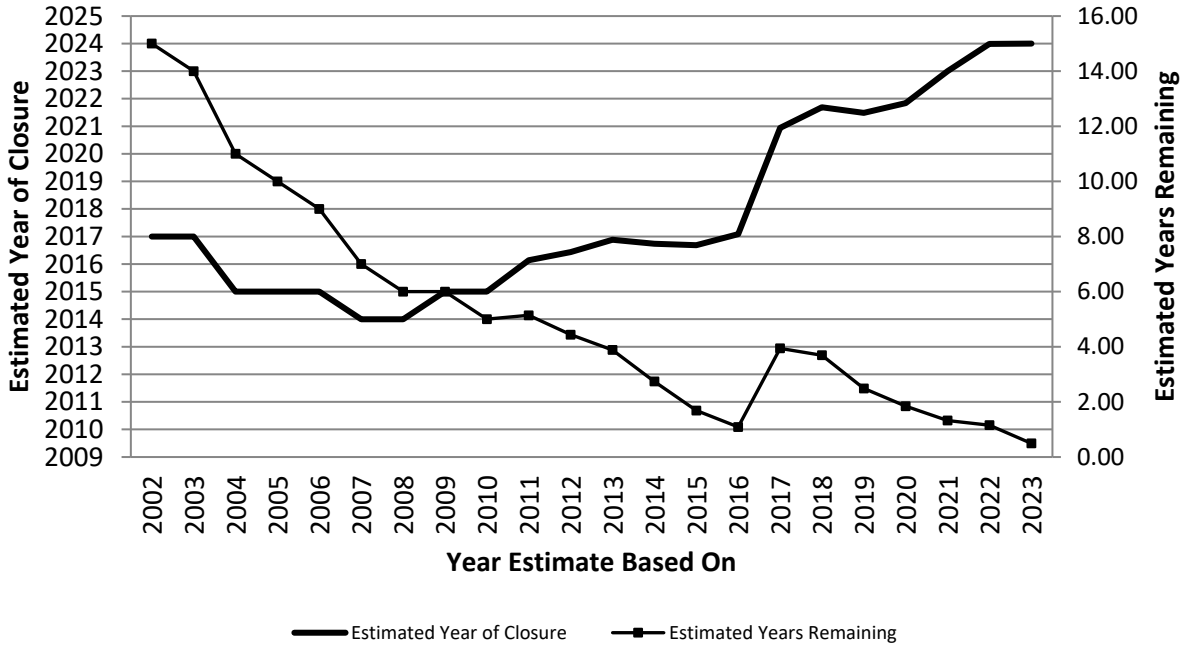
Blind River Landfill Site
Historical Estimates of Remaining Life Span



6.2.1 Waste Diversion

There is no record that the exact composition of wastes being disposed of at the Site has ever been determined, however, the Town does participate in a community-recycling program which diverts some common recyclables. Currently, rubber tires, white goods and electronics are stockpiled at the landfill for future recycling. Brush/scrap wood is also stockpiled for grinding or burning, in accordance with MECP procedures, prior to its landfilling.

Table 17 provides a summary of the estimated tonnage of recyclable material received at the Site for 2023 (provided by the Site operator).

TABLE 17: 2023 RECYCLING REPORT

Producer	Recyclable Material (tonnes)		
	FIBER	COMM	E-WASTE
Commercial	102.48	1.22	NA
GFL Depot	34.30	14.17	NA
Landfill	12.30	5.64	NA
Residential	51.74	29.47	NA
Totals	**200.82**	**50.50**	**NA**

The total waste deposited at the Site, as provided by the Town's operator, was estimated to be approximately 2,890.78 tonnes for 2023. This total waste tonnage has remained relatively constant since the data became available. The total recyclable tonnage, also provided by the operator, was 251.32 tonnes. The estimated diversion rate is therefore calculated to be 10.4%. The diversion rate calculation is included in Appendix I of this report.

6.3 Complaints

There were no complaints reported to the Town of Blind River regarding the Site during the 2023 monitoring period.

6.4 MECP Site Visit

The MECP did not complete an inspection at the Site during the 2023 reporting period.

6.5 General Comments

During 2023, with the exception of encountering challenges with the collection of tipping fees, no landfill site operational difficulties were identified by the Town of Blind River or the Site Operator.

General comments regarding Site operation include:

1. Signs have been installed and maintained at the main entrance of the Site and throughout the landfill to direct users appropriately.

2. The hours of operation for the Site are Wednesday, Thursday and Friday 10am-6pm and Saturday 9am-5pm during the summer (April 1 – Oct. 31). Wednesday to Saturday 9am-5pm during the winter (Nov.1 – March 31).

3. The Site is closed by a locked gate when a site attendant is not present to supervise landfilling operations.

4. The Town did not hold a household hazardous waste day in 2023.

5. The Town noted that at the beginning of 2023, the Site Operator was having difficulty meeting cover requirements at the landfill site, however, this issue was corrected during the reporting period.

6. Excess soil from a local road job was stockpiled at the Site for use as interim cover.

7. The Site Operator noted that the sand material used for cover along the landfill side slopes was easily eroded. To address this, clean wood material was chipped and mixed with the sand to provide greater slope stability and erosion resistance.

8. Mattresses were noted by the Site Operator as being difficult to compact and disrupted cover when driven over. The Town increased the tipping fee for the disposal of mattresses unless the mattress was received disassembled with the metal components removed.

9. Throughout the year, a variety of wildlife, including black bears, foxes, crows, ravens, gulls and eagles frequented the Site; however, no incidents of nuisance were reported.

10. Wood waste is burned at the Site in accordance with the MECP Guideline C-7. The burning of plywood, particle board, painted, varnished surfaces, etc. is prohibited and these materials must be landfilled.

11. Attention is being paid, by the Town as well as the contracted operator, to minimize environmental impacts, maximize public approval/satisfaction, as well as divert recyclable materials from landfilling.

7.0 CONCLUSIONS

The following conclusions are drawn from the assessments described herein:

1. The Site appears to be generally well run and site operations are considered satisfactory with respect to the control of dust and odour. No vector or vermin problems were observed and the Site was generally kept in good order throughout the reporting period.

2. Environmental monitoring was completed during the 2023 reporting period and the existing monitoring well network is felt to be adequate. Off-site impact in a direction hydrogeologically downgradient from the fill area is suspected and the continued monitoring of these impacts is required.

3. The assessment of groundwater trigger mechanisms reveals that:

    a. The trigger concentration for DOC was exceeded at MW3-02, MW4-02, MW1-03, MW1-15, and MW1-17 and MW1-20 during the 2023 spring and fall sampling events. DOC also exceeded trigger concentrations at MWMW1-02 and MW6-02 during the spring sampling event.
    b. During both spring and fall sampling events, iron exceeded trigger concentrations at MW4-02, MW6-02, MW1-03, MW1-15, MW3-15, MW4-15, MW1-17 and MW1-20. Tigger concentrations for iron were also exceeded at MW3-02 during the spring sampling event.
    c. During the spring and fall sampling events, MW1-03 and MW1-20 exceeded trigger concentrations for barium.
    d. During the spring and fall sampling events, chloride and sodium exceeded trigger concentrations at MW1-20 and MW1-03.
    e. MW1-03 exceeded trigger concentrations for alkalinity and boron during the spring and fall sampling events.

4. The Town is pursuing the establishment of a CAZ and is implementing improvements to site surface water management to address trigger mechanism exceedances.

5. With respect to surface water, SW2 appears to have been formed in a depression constructed during development of the solar farm that was excavated to below the water table. As SW2 is located within the limits of the delineated CAZ, leachate impacts at this location would not be unexpected.

6. SW3 is very near to a contractor's yard and may be impacted by related operations. There is no direct surface water flow pathway from areas potentially impacted by the landfill to SW3.

7. SW4 is a ponded area located just south of the toe of the fill area and within the limits of the delineated CAZ. Similarly to SW2, leachate impacts at this location would not be unexpected.

8. SW5 was not observed during the 2023 Site visits. This surface water location (a previously excavated ditch) has been filled in conjunction with the surface water management improvements.

9. Parameter concentrations at the SW6 appear to confirm this location as an appropriate background location.

10. It is difficult to confirm the source of impact observed at SW7 considering its proximity to Highway 17 and the railway line. Additional sampling is recommended to expand the database to assist with an evaluation of impact.

11. Winter highway de-icing activities may be contributing to the chloride levels impacting water quality at sample locations adjacent/downgradient of Highway 17 (MW1-03, MW1-20, SW7).

12. Based on topographic surveys completed at the Site, approximately 3,302m^3 of waste and cover material were deposited at the Site in 2023. Remaining site life is estimated to extend to the spring of 2024.

8.0 RECOMMENDATIONS

The following recommendations are provided for the Town's consideration:

1. Groundwater and surface water monitoring should be carried out as recommended (twice annually) to develop an adequate database to evaluate leachate production and migration within and from the Site.

2. Groundwater level measurements should continue to be collected during each sampling event to facilitate the ongoing interpretation of groundwater flow direction.

3. Surface water monitoring should be carried out as recommended in ECA No. A-500-7134513066 (quarterly) to support evaluation of leachate migration within and from the Site, as well as to confirm SW6 as the appropriate background location.

4. The contracted operator should continue to ensure that all landfill waste is disposed of within the approved area which is delineated by field markers.

5. Adequate cover should continue to be placed on the landfill waste in order to avoid windblown material.

6. The contracted operator should continue to minimize the co-mingling of segregated waste.

7. The steel protective casings at MW1-03 and MW2-15 should be repaired to ensure the integrity of these monitoring wells.

8. To ensure that steel casings are accessible, weathered locks at MW2-02 and MW3-15 should be replaced.

9. The Town should continue to work diligently through the EA process to ensure an adequate waste management plan can be developed and that MECP is provided updates when required.

Ministry of the Environment / Ministère de l'Environnement

Ontario

Corporation of the Town of Blind River
Box 640
11 Hudson Street
Blind River, Ontario
P0R 1B0

You are hereby notified that Provisional Certificate of Approval No. A 7138701 dated May 30, 3, issued to you, Corporation of the Town of Blind River is being amended as follows:

The owner's name is changed

:

Corporation of the Town of Blind River
Box 640
11 Hudson Street
Blind River, Ontario
P0R 1B0

om:

Town of Blind River
Box 640
11 Hudson Street
Blind River, Ontario
P0R 1B0

e following definitions are added to your Provisional Certificate of proval:

(a) "Certificate" means the Provisional Certificate of Approval No. A 7138701 as amended from time to time, including all Schedules attached to and forming part of this Certificate, as well as all Notice of Amendments;

(b) "Director" means the one or more persons who from time to time are so designated for the purpose of Part V of the Environmental Protection Act, R.S.O. 1990, as amended from time to time;

(c) "District Manager" means the District Manager of the Sault Ste. Marie District Office of the Ministry of the Environment;

(d) "EPA" means the Environmental Protection Act, R.S.O. 1990, as amended from time to time;

(e) "Owner" means the Corporation of the Town of Deep River;

(f) "Ministry" or "MOE" means the Ontario Ministry of the Environment;

(g) "Regional Director" means the Director, Northern Region of the Ministry of the Environment;

(h) "Site" means the 2 ha landfill operation and adjacent buffer lands located in Part Lot 7, Conc. 1 Striker Township;

Conditions No. 3,4,5,6, and 7 are added to your Provisional Certificate of Approval:

3. The owner is allowed to use wood bark and sawdust as daily and interim cover material for a temporary period of two years, or until the site is closed, whichever is less.

4. Should the use of wood bark or sawdust as daily and interim cover cause any environmental problem the owner shall discontinue its use.

5. Sufficient soil cover shall be available on site for use either when conditions do not permit use of the sawdust or wood bark as daily of interim cover or if performance of the material is unsatisfactory.

6. The performance and impact of the wood bark and sawdust shall be detailed in a written report which is submitted to the District Manager by the end of each of December 2000 and December 2001.

7. Only with the written consent of the District Manager shall sawdust and wood bark be used for daily or interim cover subsequent to the date which occurs two years after the date of this Notice of Amendment. The District Manger may rescind that consent at any time by provision of written notice to the owner.

The reasons for the addition of definitions and conditions 3, 4, 5, 6, and 7 are:

1. *The reason for the addition of the definitions is that it is in the public interest to clearly define terms used in this Certificate.*

2. *The reason for the additions of conditions number 3, 4, 5, 6, and 7 is to ensure that the Site is operated in an environmentally safe manner.*

In accordance with Section 139 of the Environmental Protection Act, R.S.O. 1990 c. E-19, you y by written notice served upon me and the Environmental Appeal Board within 15 days after receipt of this tice, require a hearing by the Board. Section 142 of the Environmental Protection Act, as amended provides t the Notice requiring a hearing shall state:

The portions of the approval or each term or condition in the approval in respect of which the hearing is required, and;
The grounds on which you intend to rely at the hearing in relation to each portion appealed.

In addition to these legal requirements the Notice should also include:

The name of the appellant;
The address of the appellant;
The Certificate of Approval number;
The date of the Certificate of Approval;
The name of the Director;
The municipality within which the waste disposal site is located;
or
The municipality within which the waste management system is located;

And the Notice should be signed and dated by the appellant.

This Notice must be served upon:

Attention: Mr. Ken Corbiere
Clerk Administrator

Dear Mr. Corbiere:

Re: The Corporation of the Town of Blind River
Amendment to Certificate of Approval No: A7138701

Please find enclosed a Notice which amends Provisional Certificate of Approval No. A7138701, to allow the addition of non-hazardous solid industrial waste and iron sludge waste to the categories of waste which can be accepted and disposed of at your site.

Should you have any questions regarding this amendment, please contact Ms. Maureen Burtch at the Sault Ste. Marie District Office.

Notice
Avis

ataire

The Corporation of the Town of Blind River
P.O. Box 640, 11 Hudson Street
Blind River, Ontario
P0R 1B0

Pursuant to sections 39(2) and 139(2) of the Environmental Protection Act (the "EPA") R.S.O. 1990, you are hereby notified that Provisional Certificate of Approval No. A7138701 dated November 26, 1980 is being altered to allow the addition of non-hazardous solid industrial waste and iron sludge waste to the categories of waste presently being deposited at this site.

The above-noted Provisional Certificate of Approval is amended by adding the following conditions:

2. Except as otherwise provided by these Conditions, this waste disposal site (landfill) shall be operated in accordance with the application dated October 22, 1993, and supporting documentation, plans and specifications submitted therewith, and the additional items listed in Schedule "A" below.

The reason for Condition 2 is to ensure that this waste disposal site (landfill) is operated in accordance with the application submitted to amend the Provisional Certificate of Approval and not on a basis which the Director has not been asked to consider.

3. (1) The operation of this site shall be limited only to the acceptance and disposal of the following types of waste:

(a) domestic, commercial, and other waste limited to scrap wood and brush;

(b) non-hazardous solid industrial waste; and

(c) iron sludge waste generated only from the potable water treatment facility located at Cameco Corporation in Blind River, all in accordance with Schedule "A" below.

(2) Notwithstanding Condition 3(1) above, no hauled sewage, liquid industrial waste, or hazardous waste, as defined under Regulation 347, R.R.O. 1990, shall be accepted and/or deposited at this site.

The reason for Condition 3 is to ensure that the types of waste accepted and deposited at this site are in accordance with that approved by this Provisional Certificate of Approval.

... 2

Schedule "A"

Schedule "A" is hereby amended to add the following:

Letter dated January 19, 1994 from J.M. Degraw, Cameco Corporation, to Maureen Burtch, Ministry of Environment and Energy, outlining the nature of the iron waste sludge.

Should you wish to appeal any or all of these conditions you may, by written notice served upon me and the Environmental Appeal Board within 15 days after receipt of this Notice, require a hearing by the Board. Section 142(1) of the Environmental Protection Act, as amended in 1983, provides that the Notice requiring the hearing shall state:

1. The portions of the approval or each term or condition in the approval in respect of which the hearing is required, and;
2. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

In addition to these legal requirements, the Notice should also include:

3. The name and address of the appellant;
4. The Certificate of Approval number;
5. The date of issuance of the Certificate of Approval;
6. The name of the Director;
7. The municipality within which the site is located;
8. A copy of the Certificate of Approval;

And the Notice should be signed and dated by the appellant.

Please note, unless stayed by application under Section 143 of the Environmental Protection Act, this approval is effective from the date of issue.

This Notice must be served upon:

Re: Landfilling Site
South 1/2 Lot 7, Concession 1
Township of Striker
District of Algoma

The enclosed revised Provisional Certificate of Approval contains a condition requiring it be registered on title. The reason for this condition is attached to the Certificate.

Two copies of the Certificate and reasons are on long paper to facilitate registration. Both of these should be taken to the Land Registry Office and one returned to the Director with registration particulars.

If your Certificate does not contain sufficient legal description for registration because you have not given one to the Director, you will have to provide one under Section 23(1) (e) of The Registry Act or in your application under The Land Titles Act.

In the event that the site including its buffer, is part of a larger parcel of land and you do not wish to prepare a new survey at this time, you may register the Certificate against the larger parcel of land. If you do so, the Director is prepared, if requested in the future.

1. In the case of land recorded under The Land Titles Act, to consent to an application to delete the registration from the title of lands not within the site including its buffer zone, and

2. In the case of land recorded under The Registry Act, to issue a Certificate that lands not used for the actual disposal of waste or buffer zone have not been so used.

Such documents would be issued after suitable draft documents including legal description were submitted by you or your successor. The purpose of such documents would be to assure subsequent purchasers that the lands in question were not affected by section 46 of the Environmental Protection Act.

Yours very truly

T.W. Kwan

Director

Ministry of the Environment
Ontario

Provisional Certificate No. A 713870I

PROVISIONAL CERTIFICATE OF APPROVAL
WASTE DISPOSAL SITE

Under The Environmental Protection Act, 1971 and the regulations and subject to the limitations thereof, this Provisional Certificate of Approval is issued to:

Town of Blind River
Box 640
11 Hudson Street
Blind River, Ontario
P0R 1B0

RECEIVED
DEC - 8 1980
S. S. MARIE
DISTRICT OFFICE

for the use and operation of a landfilling site within a total site area of 2 hectares.

all in accordance with the following plans and specifications:
Application and supporting information forms for a Waste Disposal Site.
Plan of the Waste Disposal Site entitled "Layout of Town Garbage Dump" dated Dec. 10, 1973.

Located: South 1/2 Lot 7, Concession 1
Township of Striker
District of Algoma

which includes the use of the site only for the disposal of the following categories of waste (NOTE: Use of the site for additional categories of wastes requires a new application and amendments to the Provisional Certificate of Approval) Domestic, commercial and "other" (limited to scrap wood and brush) wastes.

and subject to the following conditions:

1. No operation shall be carried out at the site after sixty days from this condition becoming enforceable unless this Certificate including the reasons for this condition has been registered by the applicant as an instrument in the appropriate Land Registry Office against title to the site and a duplicate registered copy thereof has been returned by the applicant to the Director.

THIS IS A TRUE COPY OF THE ORIGINAL CERTIFICATE MAILED

ON DEC 4 1980

(Signed)

Dated this 26th day of November, 19 80.

Ontario

NOTICE

TO: Town of Blind River
Box 640
11 Hudson Street
Blind River, Ontario
P0R 1B0

You are hereby notified that Provisional Certificate of Approval No. A 7138701 has been issued to you subject to the conditions outlined therein.

The reasons for the imposition of these conditions are as follows:

The reason for the condition requiring registration of the Certificate is that Section 46 of The Environmental Protection Act, 1971 prohibits any use being made of the lands after they cease to be used for waste disposal purposes within a period of twenty-five years from the year in which such land ceased to be used unless the approval of the Minister for the proposed use has been given. The purpose of this prohibition is to protect future occupants of the site and the environment from any hazards which might occur as a result of waste being disposed of on the site. This prohibition and potential hazard should be drawn to the attention of future owners and occupants by the Certificate being registered on title.

You may by written notice served upon me and the Environmental Appeal Board within 15 days after receipt of this Notice, require a hearing by the Board.

This Notice should be served upon:

The Secretary,
Environmental Appeal Board,
1 St. Clair Ave. West,
5th Floor,

ENVIRONMENTAL COMPLIANCE APPROVAL
NUMBER A-500-7134513066
Version: 1.0
Issue Date: October 26, 2022

Pursuant to section 20.3 of the Environmental Protection Act, Revised Statutes of Ontario (R.S.O.) 1990, c. E. 19 and subject to all other applicable Acts or regulations this Environmental Compliance Approval is issued to:

CORPORATION OF TOWN OF BLIND RIVER

11 HUDSON ST, BOX 640
BLIND RIVER ONTARIO
P0R1B0

For the following site:

Lot: 7, Concession: 1
Blind River, District of Algoma

You have applied under section 20.2 of Part II.1 of the Environmental Protection Act, R.S.O. 1990, c. E. 19 (Environmental Protection Act) for approval of:

the establishment of stormwater management works to service the existing municipal waste disposal site (Site), located on south ½ of lot 7, Concession 1, and Highway 17 to the south within in the Town of Blind River, District of Algoma, for the collection, transmission, and disposal of stormwater runoff from a total catchment area of 10.95 hectares to attenuate post-development peak flows to pre-development peak flows for all storm events up to and including the 100-year storm event, infiltrating into ground consisting of the following:

- **drainage swale (Intercepting Swale 1 – Catchment Area 6.1 ha):** one (1) 220 metre long drainage swale with 1.75 metre base width, 3:1 side slope and 1 metre flow depth, flowing along the northern perimeter of existing landfill site, discharging to the proposed infiltration basin located on the western perimeter of the landfill site;
- **drainage swale (Intercepting Swale 2 – Catchment Area 4.85 ha):** one (1) 200 metre long drainage swale with 1.75 metre base width, 3:1 side slope and 1 metre flow depth, flowing along the southern perimeter of existing landfill site, discharging to the proposed infiltration basin located on the southern perimeter of the landfill site;
- **infiltration basin (Catchment Area 10.95 ha):** one (1) infiltration basin located on the western perimeter of the landfill site, having a total length of 225 metres, a width of 12 metres, a base area of 2,700 squared metres, a minimum storage depth of 1.25 metres including 0.75 metres operating depth and 0.5 metres freeboard and providing an approximate storage volume of 2,430 cubic metres to store and infiltrate stormwater run-off from the site, infiltrating at 0.05 cubic metres per second under the 100-year storm event, complete with an overflow riprap spillway, flow in excess of the 100-year storm directed overland on to the attenuation zone, ultimately to the Lake Huron.

including erosion/sedimentation control measures during construction and all other controls and appurtenances essential for the proper operation of the aforementioned Works;

all in accordance with the submitted application and supporting documents listed in Schedule 1 forming part of this Approval.

DEFINITIONS

For the purpose of this environmental compliance approval, the following definitions apply:

1. "Approval" means this entire Environmental Compliance Approval and any Schedules attached to it;
2. "CAZ " means Contaminant Attenuation Zone;
3. "Director" means a person appointed by the Minister pursuant to section 5 of the EPA for the purposes of Part II.1 of the EPA;
4. "District Manager" means the District Manager of the appropriate local district office of the Ministry, where the Works are geographically located;
5. "EPA" means the *Environmental Protection Act,* R.S.O. 1990, c.E.19, as amended;
6. "Ministry" means the ministry of the Minister and includes all, employees or other persons acting on its behalf;
7. "MNRF" means the Ministry of Natural Resources and Forestry of the government of Ontario and includes all officials, employees or other persons acting on its behalf;
8. "OWRA" means the *Ontario Water Resources Act,* R.S.O. 1990, c. O.40;
9. “Owner” means Corporation of Town of Blind River, including any successors and assignees;
10. “Quarterly” means during time periods of three (3) consecutive months beginning on the first day of January, April, July or October;
11. “Works” means the approved sewage works.

TERMS AND CONDITIONS

You are hereby notified that this environmental compliance approval is issued to you subject to the terms and conditions outlined below:

1. **GENERAL CONDITIONS**
    1. The Owner shall ensure that any person authorized to carry out work on or operate any aspect of the Works is notified of this Approval and the conditions herein and shall take all reasonable measures to ensure any such person complies with the same.
    2. Except as otherwise provided by these Conditions, the Owner shall design, build, install, operate and maintain the Works in accordance with the description given in this Approval, and the application for approval of the Works.
    3. Where there is a conflict between a provision of any document in the schedule referred to in this Approval and the conditions of this Approval, the conditions in this Approval shall take precedence, and where there is a conflict between the documents in the schedule, the document bearing the most recent date shall prevail.
    4. Where there is a conflict between the documents listed in Schedule A and the application, the application shall take precedence unless it is clear that the purpose of the document was to amend the application.
    5. The conditions of this Approval are severable. If any condition of this Approval, or the application of any requirement of this Approval to any circumstance, is held invalid or unenforceable, the application of such condition to other circumstances and the remainder of this Approval shall not be affected thereby.
    6. The issuance of, and compliance with the conditions of, this Approval does not:
        1. relieve any person of any obligation to comply with any provision of any applicable statute, regulation or other legal requirement, including, but not limited to, the obligation to obtain approval from the local conservation authority/MNRF necessary to construct or operate the sewage works; or
        2. limit in any way the authority of the Ministry to require certain steps be taken to require the Owner to furnish any further information related to compliance with this Approval.

2. **EXPIRY OF APPROVAL**

1. This Approval will cease to apply to those parts of the Works which have not been constructed within five (5) years of the date of this Approval.

2. In the event that completion and commissioning of any portion of the Works is anticipated to be delayed beyond the specified expiry period, the Owner shall submit an application of extension to the expiry period, at least twelve (12) months prior to the end of the period. The application for extension shall include the reason(s) for the delay, whether there is any design change(s) and a review of whether the standards applicable at the time of Approval of the Works are still applicable at the time of request for extension, to ensure the ongoing protection of the environment.

3. **CHANGE OF OWNER**

1. The Owner shall notify the District Manager and the Director, in writing, of any of the following changes within thirty (30) days of the change occurring:

    a. change of Owner;

    b. change of address of the Owner;

    c. change of partners where the Owner is or at any time becomes a partnership, and a copy of the most recent declaration filed under the Business Names Act, R.S.O. 1990, c.B17 shall be included in the notification to the District Manager; or

    d. change of name of the corporation where the Owner is or at any time becomes a corporation, and a copy of the most current information filed under the Corporations Information Act, R.S.O. 1990, c. C39 shall be included in the notification to the District Manager.

2. In the event of any change in ownership of the Works, other than a change to a successor municipality, the Owner shall notify in writing the succeeding owner of the existence of this Approval, and a copy of such notice shall be forwarded to the District Manager and the Director.

3. The Owner shall ensure that all communications made pursuant to this condition refer to the number at the top of this Approval.

4. **OPERATION AND MAINTENANCE**

1. If applicable, any proposed storm sewers or other stormwater conveyance in this Approval can be constructed but not operated until the proposed stormwater management facilities in this Approval or any other Approval that are designed to service the storm sewers or other stormwater conveyance are in operation.

2. The Owner shall make all necessary investigations, take all necessary steps and obtain all necessary approvals so as to ensure that the physical structure, siting and operations of the Works do not constitute a safety or health hazard to the general public.

3. The Owner shall undertake an inspection of the condition of the Works, at least once a year, and undertake any necessary cleaning and maintenance to ensure that sediment, debris and excessive decaying vegetation are removed from the Works to prevent the excessive build-up of sediment, oil/grit, debris and/or decaying vegetation, to avoid reduction of the capacity and/or permeability of the Works, as applicable. The Owner shall also regularly inspect and clean out the inlet to and outlet from the Works to ensure that these are not obstructed.

4. The Owner shall construct, operate and maintain the Works with the objective that the effluent from the Works is essentially free of floating and settleable solids and does not contain oil or any other substance in amounts sufficient to create a visible film, sheen, foam or discoloration on the receiving waters.

5. The Owner shall maintain a logbook to record the results of these inspections and any cleaning and maintenance operations undertaken, and shall keep the logbook at the Owner's administrative office for inspection by the Ministry. The logbook shall include the following:

    a. the name of the Works; and

b. the date and results of each inspection, maintenance and cleaning, including an estimate of the quantity of any materials removed and method of clean-out of the Works.

6. The Owner shall prepare an operations manual prior to the commencement of operation of the Works that includes, but is not necessarily limited to, the following information:
    a. operating and maintenance procedures for routine operation of the Works;
    b. inspection programs, including frequency of inspection, for the Works and the methods or tests employed to detect when maintenance is necessary;
    c. repair and maintenance programs, including the frequency of repair and maintenance for the Works;
    d. contingency plans and procedures for dealing with potential spills and any other abnormal situations and for notifying the District Manager; and
    e. procedures for receiving, responding and recording public complaints, including recording any follow-up actions taken.
7. The Owner shall maintain the operations manual current and retain a copy at the Owner's administrative office for the operational life of the Works. Upon request, the Owner shall make the manual available to Ministry staff.

5. **TEMPORARY EROSION AND SEDIMENT CONTROL**
    1. The Owner shall install and maintain temporary sediment and erosion control measures during construction and conduct inspections once every two (2) weeks and after each significant storm event (a significant storm event is defined as a minimum of 25 millimetres of rain in any 24 hours period). The inspections and maintenance of the temporary sediment and erosion control measures shall continue until they are no longer required and at which time they shall be removed and all disturbed areas reinstated properly.
    2. The Owner shall maintain records of inspections and maintenance which shall be made available for inspection by the Ministry, upon request. The record shall include the name of the inspector, date of inspection, and the remedial measures, if any, undertaken to maintain the temporary sediment and erosion control measures.

6. **MONITORING**

Surface Water Monitoring

1. A surface water monitoring program shall be carried out by the Owner, as outlined in Schedule 2, Table 1.
2. A trigger mechanism and contingency plan shall be completed, to the satisfaction of the District Manager, and submitted for concurrence within six months of the issuance of this ECA. The trigger mechanism and contingency plan shall incorporate the following:

- A monitoring well, between CAZ boundary well and the fill area, and accompanying trigger levels that would provide sufficient time to identify a potential for surface water impacts from the landfill leachate plume, before they occur, and time to implement contingency measures, to prevent unacceptable surface water impacts;
- A monitoring well at the CAZ boundary to determine if unacceptable concentrations of leachate parameters are entering surface waters;
- Comparison of parameter concentrations at monitoring wells to those of source leachate well and background well, to determine if elevated parameter concentrations at downgradient wells are a result of landfill operations;
- Trigger concentrations for wells monitoring for potential impacts to surface waters, shall be linked to contingency actions;
- Contingency actions proposed shall be feasible for the Site and be beyond standard operational practices.

Seep Monitoring

3. The Owner shall monitor for seeps as outlined in Schedule 2, Table 2 and results shall be documented in the annual monitoring reports.

7. **REPORTING**

1. One (1) week prior to the start-up of the operation of the Works, the Owner shall notify the District Manager (in writing) of the pending start-up date.

2. The Owner shall, upon request, make all reports, manuals, plans, records, data, procedures and supporting documentation available to Ministry staff.

3. The Owner shall prepare a performance report within ninety (90) days following the end of the period being reported upon, and submit the report(s) to the District Manager annually by March 31. The first such report shall cover the first annual period following the commencement of operation of the Works and subsequent reports shall be prepared to cover successive annual periods following thereafter. The reports shall contain, but shall not be limited to, the following information:

    1. a description of any operating problems encountered and corrective actions taken;

    2. a summary of all maintenance carried out on any major structure, equipment, apparatus, mechanism or thing forming part of the Works, including an estimate of the quantity of any materials removed from the Works;

    3. a summary of any complaints received during the reporting period and any steps taken to address the complaints;

    4. a summary of all spill or abnormal discharge events; and

    5. any other information the District Manager requires from time to time.

    6. a summary and interpretation of surface water monitoring data and groundwater monitoring data used in monitoring for potential impacts to surface waters; and

    7. a summary of results of seep monitoring. If none are found, this information shall also be reported.

8. **RECORD KEEPING**

    1. The Owner shall retain for a minimum of five (5) years from the date of their creation, all records and information related to or resulting from the operation, maintenance and monitoring activities required by this Approval.

REASONS

The reasons for the imposition of these terms and conditions are as follows:

1. Condition 1 is imposed to ensure that the Works are constructed and operated in the manner in which they were described and upon which approval was granted. This condition is also included to emphasize the precedence of conditions in the Approval and the practice that the Approval is based on the most current document, if several conflicting documents are submitted for review. Condition 1.6 is included to emphasize that the issuance of this Approval does not diminish any other statutory and regulatory obligations to which the Owner is subject in the construction, maintenance and operation of the Works. The Condition specifically highlights the need to obtain any necessary conservation authority approvals. The Condition also emphasizes the fact that this Approval doesn't limit the authority of the Ministry to require further information.

2. Condition 2 is included to ensure that, when the Works are constructed, the Works will meet the standards that apply at the time of construction to ensure the ongoing protection of the environment.

3. Condition 3 is included to ensure that the Ministry records are kept accurate and current with respect to the approved Works and to ensure that subsequent owners of the Works are made aware of the Approval and continue to operate the Works in compliance with it.

4. Condition 4 is included as regular inspection and necessary removal of sediment and excessive decaying vegetation from the Works are required to mitigate the impact of sediment, debris and/or decaying vegetation on the treatment capacity of the Works. The Condition also ensures that adequate storage is maintained in the Works at all times as required by the design. Furthermore, this Condition is included to ensure that the Works are operated and maintained to function as designed.

5. Condition 5 is included as installation, regular inspection and maintenance of the temporary sediment and erosion control measures is required to mitigate the impact on the downstream receiving watercourse during construction until they are no longer required.
6. Condition 6 is added to ensure the owner has a plan with an organized set of procedures for identifying and responding to potential issues relating to groundwater and surface water contamination near or at the site.
7. Condition 7 is included to provide a performance record for future references, to ensure that the Ministry is made aware of problems as they arise, and to provide a compliance record for all the terms and conditions outlined in this Approval, so that the Ministry can work with the Owner in resolving any problems in a timely manner.
8. Condition 8 is included to require that all records are retained for a sufficient time period to adequately evaluate the long-term operation and maintenance of the Works.

APPEAL PROVISIONS

In accordance with Section 139 of the *Environmental Protection Act*, you may by written notice served upon me and the Ontario Land Tribunal within 15 days after receipt of this notice, require a hearing by the Tribunal. Section 142 of the *Environmental Protection Act* provides that the notice requiring the hearing ("the Notice") shall state:

I. The portions of the environmental compliance approval or each term or condition in the environmental compliance approval in respect of which the hearing is required, and;

II. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

The Notice should also include:

I. The name of the appellant;

II. The address of the appellant;

III. The environmental compliance approval number;

IV. The date of the environmental compliance approval;

V. The name of the Director, and;

VI. The municipality or municipalities within which the project is to be engaged in.

And the Notice should be signed and dated by the appellant.

This Notice must be served upon:

Registrar* Ontario Land Tribunal 655 Bay Street, Suite 1500 Toronto, Ontario M5G 1E5 OLT.Registrar@ontario.ca	and	The Director appointed for the purposes of Part II.1 of the *Environmental Protection Act* Ministry of the Environment, Conservation and Parks 135 St. Clair Avenue West, 1st Floor Toronto, Ontario M4V 1P5

*** Further information on the Ontario Land Tribunal's requirements for an appeal can be obtained directly from the Tribunal at: Tel: (416) 212-6349 or 1 (866) 448-2248, or www.olt.gov.on.ca**

The above noted activity is approved under s.20.3 of Part II.1 of the *Environmental Protection Act*.

Dated at Toronto this 26th day of October, 2022

Aziz Ahmed

Director

appointed for the purposes of Part II.1 of the Environmental Protection Act

c: Ryan Wilson, Kresin Engineering Corporation
Kathryn Scott, CORPORATION OF TOWN OF BLIND RIVER

The following schedules are a part of this environmental compliance approval:
Schedule 1

SCHEDULE 1

1. Application for Environmental Compliance Approval, dated June 21, 2021, received on June 21, 2021, submitted by Kresin Engineering Corporation on behalf of the Town of Blind River;
2. Municipal Waste Disposal Site Expansion - SURFACE WATER MANAGEMENT PLAN AND SYSTEM DESIGN, SWM Report, dated June 2021, prepared by Kresin Engineering Corporation;
3. Revised SWM Report "The Corporation of the Town of Blind River Municipal Waste Disposal Site Expansion Surface Water Management Plan and System Design, prepared by Kresin Engineering Corporation, dated April 7, 2022;
4. The Corporation of the Town of Blind River Municipal Waste Disposal Site - Ground and Surface Water Monitoring, Trigger Mechanisms and Contingency Plan (Monitoring Plan), prepared by Kresin Engineering Corporation - Revision 2, dated May 2022;
5. Engineering Drawings, signed, stamped and dated on August 10, 2021, prepared by Kresin Engineering Corporation;
6. Revised Engineering Drawings (2073 BR LF Drainage Management-D1.pdf and 2073 BR LF Drainage Management-D2.pdf) stamped, signed and dated on September 17, 2021; and
7. Response to Information Request, emails received from Ryan Wilson from Kresin Engineering Corporation, dated August 30, 2021 and from Chris Kresin from Kresin Engineering Corporation, dated September 20, 2021 and September 24, 2021 respectively including revised SWM report and revised drawings;

SCHEDULE 2

Surface Water Monitoring Program - Table 1

Sampling Locations	Frequency	Parameters to be Analysed
SW1- approximately 80 meters southwest of fill area where water pools	Quarterly	Alkalinity, ammonia, arsenic, barium, boron, cadmium, chloride, conductivity, copper, iron, lead, manganese, mercury, nitrate, nitrite, Total Kjeldahl Nitrogen, pH, total phosphorous, total suspended solids, total dissolved solids, sulphate, zinc, biological oxygen demand (BOD5), chemical oxygen demand, phenol, Chromium, DOC and Hardness. Field Parameters: Conductivity, pH, dissolved oxygen, flow and Temperature.
SW2- approximately 330 meters southwest of fill area	Quarterly	
SW3- drainage ditch approximately 440 meters southwest of fill area	Quarterly	
SW4- approximately 95 meters south of southeast corner of fill area	Quarterly	
SW5- approximately 110 meters southwest of the southeast corner of fill area	Quarterly	
SW6- background location, approximately 200 meters north of fill area	Quarterly	
SW7- 120 meters west of the southwest corner of CAZ, between Hwy 17 right-of-way and railroad tracks, within a wetland	Quarterly	

Seep Monitoring Program - Table 2

Locations	Frequency	Information to be Recorded and Parameters to be Analysed
Inspection of the site for seeps	Quarterly	If a seep is observed and quantity is sufficient, samples shall be taken for the same analysis as for surface water sampling (Table 1). Date and location (including geographic coordinates) shall be recorded. Estimate of flow rate

Appendix D
Observation Well and Surface Water Sampling Protocol

GROUNDWATER MONITORING AND SAMPLING PROTOCOL

1.0 EQUIPMENT PREPARATION

1. All field instruments shall be calibrated according the manufacturer specifications before each sampling event.

2. Sample bottles obtained from the analyzing laboratory shall be inspected for damage and to ensure that all required bottles are present.

2.0 WATER LEVEL MEASUREMENTS

1. If visiting the groundwater location for the first time or if not already collected, record GPS coordinates of the groundwater location.

2. Prior to purging/sampling, water levels shall be measured with the electronic tape.

3. Water level measurements shall be taken without the removal of the dedicated sampling device (tubing and foot-valve arrangements).

4. Water level and well depth measurements shall be taken from the top of the monitoring well. The measurement will be taken from the top of the PVC pipe and not the top of the steel protective casing or the ground level.

5. Measurements shall be recorded.

6. Thoroughly clean the measuring device after taking measurements in each monitor to eliminate contamination between wells.

3.0 PURGING PROCEDURE

1. Prior to sampling, each well shall be purged to remove the stagnant water within the well casing, to allow the sampling to be of fresh groundwater.

2. The volume of standing water in each monitoring well shall be calculated from the recorded static level and the total well depth and recorded. (For a 50 mm diameter well casing, 1 metre of water column = 2 L of water).

3. Three casing volumes shall be removed using the dedicated samplers. The purged water shall be measured into a calibrated container and the volume removed shall be recorded for each well. Slow inflow monitors shall be purged completely dry. The volume of purged water shall be recorded for each well. The water that is purged should be retained to be used for samples ONLY IF the well does not recover to allow sampling. If the purged water is used as a sample it must be clearly labelled as such.

4. Conductivity, temperature pH and dissolved oxygen values shall be field measured and recorded after the removal of each casing volume to confirm that the parameters have stabilized.

4.0 SAMPLING/SUBMISSION PROCEDURE

1. Suitable sample bottles (containing pre-measured preservatives, as required) shall be obtained from the analyzing laboratory in advance of the sampling program.

2. Field blank samples shall be collected during the same time and at the same location during the sampling program. Field blanks shall be collected in a similar manner as the sample but without using the groundwater collection equipment. Distilled water shall be used for submitting field blanks to the laboratory.

3. The number and type of field and spiked blanks shall be determined by prior consultation with the laboratory representative.

4. If possible, samples shall be collected the day following the purging exercise (to permit water-level recovery in the slower responding monitors) by means of the dedicated samplers in each monitor well.

5. Samples collected for metal determinations (which include iron and manganese) shall be field filtered before placement into the sample bottle containing acid preservative. If appreciable sediment is encountered in the sample and filtering cannot be undertaken, a sample should be collected in a clean bottle without preservative, and the sediment shall be allowed to settle before a sample is decanted for submission to a laboratory for subsequent filtering/acidification.

6. Sample bottles for volatile organics shall completely fill the sample bottle, without any air (head) space.

7. Each sample bottle shall be labelled to indicate the project name, well number, time of sample collection, preservatives added and analyses to be performed.

8. Place samples into a cooler with pre-frozen ice packs and deliver to the laboratory within 24 hours after the completion of the sampling program.

9. A Chain of Custody form shall be completed and submitted together with the samples to the laboratory.

SURFACE WATER MONITORING AND SAMPLING PROTOCOL

1. If visiting the surface water location for the first time or if not already collected, record GPS coordinates of the surface water location.

2. Disposable latex gloves shall be worn throughout the sampling procedure.

3. Conductivity, temperature, pH and dissolved oxygen shall be field measured and recorded at each sampling location.

4. If required, QA/QC blanks shall be obtained from the analyzing laboratory in advance of the sampling program. The number and type of blanks shall be determined by prior consultation with a laboratory representative.

5. Suitable sample bottles (containing pre-measured preservatives, as required) shall be obtained from the analyzing laboratory in advance of the sampling program and shall be assigned a unique sample number.

6. Samples shall be collected by partially submerging the sample bottles into the surface water, making sure to not overflow the bottles or flushing out any preservative.

7. Any observations made during sample collection shall be recorded.

8. Each sample bottle shall be labelled to indicate the project name, well number, time of sample collection, preservatives added and analyses to be performed.

9. Samples shall be placed into a cooler with pre-frozen ice packs and delivered to the laboratory within 24 hours after the completion of the sampling program.

10. A Chain of Custody form shall be completed and submitted together with the samples to the laboratory.

KEC Project: 2331.01 — RECORDERS: JS/KS

DESCRIPTION: SW4 — GPS INFO:

DATE & TIME: Oct. 11, 2023 3:07pm

Total depth of well from top of casing: — m (a)

Depth to water from top of casing: — m (b)

Height of casing above ground — m

Calculate Purge Volume

Note: calc is 3 volumes for 2" well

V= 3 x 0.025^2 x π x (total well depth (a) - distance to water (b))

V= (5.89049×10^{-3}) x (_____ - _____)

V= _____m^3 x 1000 = —Litres

Purged —Litres

Laboratory Analytical Results

CERTIFICATE OF ANALYSIS

Work Order	: **TY2305646**	Page	: 1 of 15
Client	: **Kresin Engineering Corporation**	Laboratory	: Thunder Bay - Environmental
Contact	: Jennifer Sharpe	Account Manager	: Cassidy Young
Address	: 536 Fourth Line East Sault Ste Marie ON Canada P6A 5K8	Address	: 1081 Barton Street Thunder Bay ON Canada P7B 5N3
Telephone	: ----	Telephone	: +1 807 623 6463
Project	: Blind River Landfill	Date Samples Received	: 15-Jun-2023 10:20
PO	: ----	Date Analysis Commenced	: 19-Jun-2023
C-O-C number	: ----	Issue Date	: 28-Jun-2023 17:06
Sampler	: ----		
Site	: ----		
Quote number	: Blind River Landfill		
No. of samples received	: 18		
No. of samples analysed	: 17		

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

Signatories	*Position*	*Laboratory Department*
Cassandra Grzelewski	Team Leader - Inorganics	Inorganics, Thunder Bay, Ontario
Daron Mooney	Laboratory Assistant	Inorganics, Thunder Bay, Ontario
Greg Pokocky	Manager - Inorganics	Inorganics, Waterloo, Ontario
Greg Pokocky	Manager - Inorganics	Metals, Waterloo, Ontario
Julie Ruoho	Teamleader Wet Chem	Inorganics, Thunder Bay, Ontario
Mingjian Yang	Laboratory Assistant	Inorganics, Thunder Bay, Ontario
Sarah Birch	VOC Section Supervisor	VOC, Waterloo, Ontario
Shannon Veltri	Supervisor - Water Chemistry	Inorganics, Thunder Bay, Ontario
Walt Kippenhuck	Supervisor - Inorganic	Inorganics, Waterloo, Ontario

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances

LOR: Limit of Reporting (detection limit).

Unit	*Description*
-	no units
%	percent
µg/L	micrograms per litre
µS/cm	microsiemens per centimetre
meq/L	milliequivalents per litre
mg/L	milligrams per litre
pH units	pH units

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Workorder Comments

Sample Travel Blank: CN Container not received at laboratory, but requested on Chain of Custody / analytical request form; subsample cannot be obtained from other containers to meet request. The requested analysis cannont be performed.

Qualifiers

Qualifier	*Description*
BODF	*BOD analyzed from frozen (preserved) sample. Hold time for unpreserved samples was exceeded, but freezing can extend hold time to at least 1 month, according to ISO 5667-3 (2018).*
DLB	*Detection Limit Raised. Analyte detected at comparable level in Method Blank.*
DLDS	*Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.*

DLHC	*Detection Limit Raised: Dilution required due to high concentration of test analyte(s).*
DLM	*Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).*
OWP	*Organic water sample contained visible sediment (must be included as part of analysis). Measured concentrations of organic substances in water can be biased high due to presence of sediment.*

Analytical Results

Shannon Veltri	Supervisor - Water Chemistry	Metals, Thunder Bay, Ontario
Walt Kippenhuck	Supervisor - Inorganic	Inorganics, Waterloo, Ontario

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances

LOR: Limit of Reporting (detection limit).

Unit	*Description*
-	no units
%	percent
µS/cm	microsiemens per centimetre
meq/L	milliequivalents per litre
mg/L	milligrams per litre
pH units	pH units

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Qualifiers

Qualifier	*Description*
DLDS	*Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.*
DLM	*Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).*

QUALITY CONTROL INTERPRETIVE REPORT

Work Order	: **TY2307746**	Page	: 1 of 19
Client	: **Kresin Engineering Corporation**	Laboratory	: ALS Environmental - Thunder Bay
Contact	: Jennifer Sharpe	Account Manager	: Cassidy Young
Address	: 536 Fourth Line East Sault Ste Marie ON Canada P6A 5K8	Address	: 1081 Barton Street Thunder Bay, Ontario Canada P7B 5N3
Telephone	: ----	Telephone	: +1 807 623 6463
Project	: Blind River Landfill	Date Samples Received	: 09-Aug-2023 09:30
PO	: ----	Issue Date	: 17-Aug-2023 11:24
C-O-C number	: ----		
Sampler	: Jennifer Sharpe		
Site	: Kresin Engineering - Blind River Landfill		
Quote number	: Blind River Landfill		
No. of samples received	: 4		
No. of samples analysed	: 4		

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

Key

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.
CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.
DQO: Data Quality Objective.
LOR: Limit of Reporting (detection limit).
RPD: Relative Percent Difference.

Workorder Comments

Holding times are displayed as "---" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Summary of Outliers

Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- No Matrix Spike outliers occur.
- No Test sample Surrogate recovery outliers exist.

Outliers: Reference Material (RM) Samples

- No Reference Material (RM) Sample outliers occur.

Outliers : Analysis Holding Time Compliance (Breaches)

- No Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- No Quality Control Sample Frequency Outliers occur.

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and /or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

Legend & Qualifier Definitions

Rec. HT: ALS recommended hold time (see units).

Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: **Water**

Evaluation: × = QC frequency outside specification; ✓ = QC frequency within specification.

Quality Control Sample Type			Count		Frequency (%)		
Analytical Methods	*Method*	*QC Lot #*	*QC*	*Regular*	*Actual*	*Expected*	*Evaluation*
Laboratory Duplicates (DUP)							
Alkalinity Species by Titration	E290	1078558	1	15	6.6	5.0	✓

Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Conductivity in Water	E100 ALS Environmental - Thunder Bay	Water	APHA 2510 (mod)	Conductivity, also known as Electrical Conductivity (EC) or Specific Conductance, is measured by immersion of a conductivity cell with platinum electrodes into a water sample. Conductivity measurements are temperature-compensated to 25°C.
pH by Meter	E108 ALS Environmental - Thunder Bay	Water	APHA 4500-H (mod)	pH is determined by potentiometric measurement with a pH electrode, and is conducted at ambient laboratory temperature (normally 20 ± 5°C). For high accuracy test results, pH should be measured in the field within the recommended 15 minute hold time.
TSS by Gravimetry	E160 ALS Environmental - Thunder Bay	Water	APHA 2540 D (mod)	Total Suspended Solids (TSS) are determined by filtering a sample through a glass fibre filter, following by drying of the filter at 104 ± 1°C, with gravimetric measurement of the filtered solids. Samples containing very high dissolved solid content (i.e. seawaters, brackish waters) may produce a positive bias by this method. Alternate analysis methods are available for these types of samples.
TDS by Gravimetry	E162 ALS Environmental - Thunder Bay	Water	APHA 2540 C (mod)	Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, with evaporation of the filtrate at 180 ± 2°C for 16 hours or to constant weight, with gravimetric measurement of the residue.
Chloride in Water by IC	E235.Cl ALS Environmental - Thunder Bay	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrite in Water by IC	E235.NO2 ALS Environmental - Thunder Bay	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrate in Water by IC	E235.NO3 ALS Environmental - Thunder Bay	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Sulfate in Water by IC	E235.SO4 ALS Environmental - Thunder Bay	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Alkalinity Species by Titration	E290 ALS Environmental - Thunder Bay	Water	APHA 2320 B (mod)	Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Ammonia by Fluorescence	E298 ALS Environmental - Thunder Bay	Water	Method Fialab 100, 2018	Ammonia in water is determined by automated continuous flow analysis with membrane diffusion and fluorescence detection, after reaction with OPA (ortho-phthalaldehyde). This method is approved under US EPA 40 CFR Part 136 (May 2021)
Total Kjeldahl Nitrogen by Fluorescence (Low Level)	E318 ALS Environmental - Thunder Bay	Water	Method Fialab 100, 2018	TKN in water is determined by automated continuous flow analysis with membrane diffusion and fluorescence detection, after reaction with OPA (ortho-phthalaldehyde). This method is approved under US EPA 40 CFR Part 136 (May 2021).
Dissolved Organic Carbon by Combustion (Low Level)	E358-L ALS Environmental - Waterloo	Water	APHA 5310 B (mod)	Dissolved Organic Carbon (Non-Purgeable), also known as NPOC (dissolved), is a direct measurement of DOC after a filtered (0.45 micron) sample has been acidified and purged to remove inorganic carbon (IC). Analysis is by high temperature combustion with infrared detection of CO2. NPOC does not include volatile organic species that are purged off with IC. For samples where the majority of DC (dissolved carbon) is comprised of IC (which is common), this method is more accurate and more reliable than the DOC by subtraction method (i.e. DC minus DIC).
Total Phosphorus by Colourimetry (0.002 mg/L)	E372-U ALS Environmental - Thunder Bay	Water	APHA 4500-P E (mod).	Total Phosphorus is determined colourimetrically using a discrete analyzer after heated persulfate digestion of the sample.
Total metals in Water by CRC ICPMS	E420 ALS Environmental - Thunder Bay	Water	EPA 200.2/6020B (mod)	Water samples are digested with nitric and hydrochloric acids, and analyzed by Collision/Reaction Cell ICPMS. Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.
Dissolved Metals in Water by CRC ICPMS	E421 ALS Environmental - Thunder Bay	Water	APHA 3030B/EPA 6020B (mod)	Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by Collision/Reaction Cell ICPMS. Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.
Total Mercury in Water by CVAAS	E508 ALS Environmental - Waterloo	Water	EPA 1631E (mod)	Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS
Dissolved Mercury in Water by CVAAS	E509 ALS Environmental - Waterloo	Water	APHA 3030B/EPA 1631E (mod)	Water samples are filtered (0.45 um), preserved with HCl, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.
Biochemical Oxygen Demand - 5 day	E550 ALS Environmental - Thunder Bay	Water	APHA 5210 B (mod)	Samples are diluted and incubated for a specified time period, after which the oxygen depletion is measured using a dissolved oxygen meter. Free chlorine is a negative interference in the BOD method; please advise ALS when free chlorine is present in samples.

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Chemical Oxygen Demand by Colourimetry (Low Level)	E559-L ALS Environmental - Thunder Bay	Water	APHA 5220 D (mod)	Samples are analyzed using the closed reflux colourimetric method.
Phenols (4AAP) in Water by Colorimetry	E562 ALS Environmental - Waterloo	Water	EPA 9066	This automated method is based on the distillation of phenol and subsequent reaction of the distillate with alkaline ferricyanide (K3Fe(CN)6) and 4-amino-antipyrine (4-AAP) to form a red complex which is measured colorimetrically.
Dissolved Hardness (Calculated)	EC100 ALS Environmental - Thunder Bay	Water	APHA 2340B	"Hardness (as CaCO3), dissolved" is calculated from the sum of dissolved Calcium and Magnesium concentrations, expressed in CaCO3 equivalents. "Total Hardness" refers to the sum of Calcium and Magnesium Hardness. Hardness is normally or preferentially calculated from dissolved Calcium and Magnesium concentrations, because it is a property of water due to dissolved divalent cations.
Ion Balance using Dissolved Metals	EC101 ALS Environmental - Thunder Bay	Water	APHA 1030E	Cation Sum, Anion Sum, and Ion Balance are calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Dissolved species are used where available. Minor ions are included where data is present. Ion Balance cannot be calculated accurately for waters with very low electrical conductivity (EC).

Preparation Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Preparation for Ammonia	EP298 ALS Environmental - Thunder Bay	Water		Sample preparation for Preserved Nutrients Water Quality Analysis.
Digestion for TKN in water	EP318 ALS Environmental - Thunder Bay	Water	APHA 4500-Norg D (mod)	Samples are digested at high temperature using Sulfuric Acid with Copper catalyst, which converts organic nitrogen sources to Ammonia, which is then quantified by the analytical method as TKN. This method is unsuitable for samples containing high levels of nitrate. If nitrate exceeds TKN concentration by ten times or more, results may be biased low.
Preparation for Dissolved Organic Carbon for Combustion	EP358 ALS Environmental - Waterloo	Water	APHA 5310 B (mod)	Preparation for Dissolved Organic Carbon
Digestion for Total Phosphorus in water	EP372 ALS Environmental - Thunder Bay	Water	APHA 4500-P E (mod).	Samples are heated with a persulfate digestion reagent.
Dissolved Metals Water Filtration	EP421 ALS Environmental - Thunder Bay	Water	APHA 3030B	Water samples are filtered (0.45 um), and preserved with HNO3.
Dissolved Mercury Water Filtration	EP509 ALS Environmental - Waterloo	Water	APHA 3030B	Water samples are filtered (0.45 um), and preserved with HCl.

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances

LOR: Limit of Reporting (detection limit).

Unit	*Description*
-	no units
%	percent
µS/cm	microsiemens per centimetre
meq/L	milliequivalents per litre
mg/L	milligrams per litre
pH units	pH units

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Qualifiers

Qualifier	*Description*
DLDS	*Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.*
DLHC	*Detection Limit Raised: Dilution required due to high concentration of test analyte(s).*
DLM	*Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).*

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances

LOR: Limit of Reporting (detection limit).

Unit	*Description*
-	no units
%	percent
µg/L	micrograms per litre
µS/cm	microsiemens per centimetre
meq/L	milliequivalents per litre
mg/L	milligrams per litre
pH units	pH units

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Workorder Comments

Amendment (21/02/2024): This report has been amended and re-released to allow the reporting of additional analytical data: -002 ion balance added

Received MW-03-02 routine bottle empty. Will be poured off from BOD bottle for analysis.

Qualifiers

Qualifier	*Description*
DLDS	*Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.*
DLHC	*Detection Limit Raised: Dilution required due to high concentration of test analyte(s).*
DLM	*Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).*

CERTIFICATE OF ANALYSIS

Work Order	: **TY2310464**	Page	: 1 of 6
Client	: **Kresin Engineering Corporation**	Laboratory	: ALS Environmental - Thunder Bay
Contact	: Jennifer Sharpe	Account Manager	: Cassidy Young
Address	: 536 Fourth Line East Sault Ste Marie ON Canada P6A 5K8	Address	: 1081 Barton Street Thunder Bay ON Canada P7B 5N3
Telephone	: ----	Telephone	: +1 807 623 6463
Project	: Blind River Landfill	Date Samples Received	: 12-Oct-2023 09:30
PO	: ----	Date Analysis Commenced	: 12-Oct-2023
C-O-C number	: ----	Issue Date	: 30-Oct-2023 11:42
Sampler	: ----		
Site	: Kresin Engineering - Blind River Landfill		
Quote number	: Blind River Landfill		
No. of samples received	: 6		
No. of samples analysed	: 6		

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

Signatories	*Position*	*Laboratory Department*
Cassandra Grzelewski	Team Leader - Inorganics	Inorganics, Thunder Bay, Ontario
Greg Pokocky	Manager - Inorganics	Inorganics, Waterloo, Ontario
Julie Ruoho	Teamleader Wet Chem	Inorganics, Thunder Bay, Ontario
Nik Perkio	Inorganics Analyst	Metals, Waterloo, Ontario
Rhovee Guevarra		Metals, Winnipeg, Manitoba
Sarah Birch	VOC Section Supervisor	VOC, Waterloo, Ontario
Walt Kippenhuck	Supervisor - Inorganic	Inorganics, Waterloo, Ontario
Walt Kippenhuck	Supervisor - Inorganic	Metals, Waterloo, Ontario

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances

LOR: Limit of Reporting (detection limit).

Unit	*Description*
-	no units
%	percent
µg/L	micrograms per litre
µS/cm	microsiemens per centimetre
meq/L	milliequivalents per litre
mg/L	milligrams per litre
pH units	pH units

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Qualifiers

Qualifier	*Description*
DLDS	*Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.*
DLM	*Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).*

Water Quality Data Trends

Groundwater Quality Trends

Charts H.1-H.6 plot annual concentrations (2 samples per year) of selected parameters at certain groundwater sampling locations. No statistically significant trends appear evident in the data associated with the above mentioned monitoring wells. Reasonable Use Criteria shown on the plots are developed using median background concentrations based on the entire data set associated with MW1-02.

Appendix I
Site Capacity Calculations

Town of Blind River Municipal Landfill - Site Life Calculation

2023 Annual Monitoring and Operations Report:

- Survey comparisons indicate a fill volume of 3,302m^3 (November 2, 2022 – October 5, 2023)
- There are 338 days between November 2, 2022 and October 5, 2023

Therefore, the average daily disposal rate during this period is: $\frac{3{,}302\ m^3}{338\ \text{days}} = 9.76\ m^3/\text{day}$

The 2023 annual disposal rate is: $\frac{9.7 m^3}{\text{Day}} \times 365\ \text{days} = 3{,}566\ m^3/\text{year}$

Remaining capacity as of October 5, 2023 (comparison of final contours): 1,758 m^3

When using the annual disposal rate of 3,566 m^3/year, the remaining site life of the landfill (as of October 2023) is:

$$= \frac{1{,}758\ m^3}{3{,}566 m^3/\text{year}}$$

= **0.49 years**

The remaining site life of the landfill is set to expire approximately 0.49 years after the survey being completed on October 5, 2023 when applying the annual disposal rate.

When applying the average annual disposal rate of 6,274 m^3/year, the remaining site life at the landfill is estimated to be approximately:

$$= \frac{1{,}758\ m^3}{6{,}304\ m^3/\text{year}}$$

= **0.28 years**

The remaining site of the landfill is set to expire approximately 0.28 years after the survey being completed on October 5, 2023 when applying the average annual disposal rate.

Town of Blind River Municipal Landfill – Diversion Rate Calculation

2023 Annual Monitoring and Operations Report:

Total Waste = 2,168.09 tonnes (provided by the Town)

Total Recyclables = 251.32 tonnes (provided by the Town)

$$\text{Diversion Rate} = \frac{\text{Total Recyclables}}{\text{Total Recyclables + Total Waste}}$$

$$= \frac{251.32}{251.32 + 2{,}168.09}$$

$$= \mathbf{10.4\%}$$

Appendix J
Monitoring and Screening Checklist

Appendix D-Monitoring and Screening Checklist
General Information and Instructions

General Information: The checklist is to be completed, and submitted with the Monitoring Report.
Instructions: A complete checklist consists of:
(a) a completed and signed checklist, including any additional pages of information which can be attached as needed to provide further details where indicated.
(b) completed contact information for the Competent Environmental Practitioner (CEP)
(c) self-declaration that CEP(s) meet(s) the qualifications as set out below and in Section 1.2 of the Technical Guidance Document.

Definition of Groundwater CEP:
For groundwater, the CEP must have expertise in hydrogeology and meet one of the following:
(a) the person holds a licence, limited licence or temporary licence under the *Professional Engineers Act*; or
(b) the person holds a certificate of registration under the *Professional Geoscientists Act, 2000* and is a practicing member, temporary, member or limited member of the Association of Professional Geoscientists of Ontario. O. Reg. 66/08, s. 2..
Definition of Surface water CEP:
A CEP for surface water assessments is a scientist, professional engineer or professional geoscientist as described in (a) and (b) above with demonstrated experience and post-secondary education, either a diploma or degree, in hydrology, aquatic ecology, limnology, aquatic biology, physical geography with specialization in surface water, and/or water resource management.

The type of scientific work that a CEP performs must be consistent with that person's education and experience. If an individual has appropriate training and credentials in both groundwater and surface water and is responsible for both areas of expertise, the CEP may then complete and validate both sections of the checklist.

Monitoring Report and Site Information	
Waste Disposal Site (WDS) Name	Town of Blind River Municipal Landfill Site
Location (e.g. street address, lot, concession)	Highway 17, South 1/2 of Lot 7, Concession 1 of Striker Township, District of Algoma
GPS Location (taken within the property boundary at front gate/ front entry)	N 5116641.907 m E 354605.951 m Zone: 17T Lat. 46.187825 Long. -82.884092
Municipality	Blind River
Client and/or Site Owner	Town of Blind River
Monitoring Period (Year)	2023
This Monitoring Report is being submitted under the following:	
Environmental Compliance Approval (ECA) Number (formerly "Certificate of Approval" (C of A)) :	A713870 dated Nov. 26, 1980
Director's Order No.:	N/A
Provincial Officer's Order No.:	N/A

Other:	N/A		
Report Submission Frequency	◉ **Annual** ○ **Other**	Regulation 232/98 "Landfilling Sites" states "(a) within three months after each anniversary of the date on which waste was first accepted at the site, an annual report is prepared respecting the operation of the landfilling site...".	
The site is: **(Operation Status)**	◉ **Open** ○ **Inactive** ○ **Closed**		
Is there an active waste transfer station at the site?	○ **Yes** ◉ **No**		
Does this WDS have a Closure Plan?	◉ **Not yet submitted** ○ **Submitted and under review** ○ **Submitted and approved**		
Total Approved Capacity	N/A	*Units*	Cubic Metres
Maximum Approved Fill Rate		*Units*	
Total Waste Received within Monitoring Period (Year)	3,737	*Units*	Cubic Metres
Total Waste Received within Monitoring Period (Year) *Describe the methodology used to determine this quantity*	Estimated		
Estimated Remaining Capacity	1,758	*Units*	Cubic Metres
Estimated Remaining Capacity *Describe the methodology used to determine this quantity*	Direct Survey (GPS/Total Station)		
Estimated Remaining Capacity *Date Last Determined*	05/10/2023		
Non-Hazardous Approved Waste Types	☒ Domestic ☒ Industrial, Commercial & Institutional (IC&I) ☐ Source Separated Organics (Green Bin) ☒ Tires	☐ Contaminated Soil ☐ Wood Waste ☒ Blue Box Material ☐ Processed Organics ☐ Leaf and Yard Waste	☐ Food Processing/Preparation Operations Waste ☐ Hauled Sewage Other:
Subject Waste Approved Waste Classes: Hazardous & Liquid Industrial *(separate waste classes by comma)*	N/A		

Year Site Opened *(enter the Calendar Year only)*	1970	**Current ECA Issue Date**	26-Nov-1980
Is your Site required to submit Financial Assurance?		○ **Yes** ◉ **No**	
Describe how your WDS is designed.		◉ Natural Attenuation only ○ Fully engineered Facility ○ Partially engineered Facility	
Does your Site have an approved Contaminant Attenuation Zone?		○ **Yes** ◉ **No**	
If closed, specify ECA, control or authorizing document closure date:		N/A	
Has the nature of the operations at the site changed during this monitoring period?	○ **Yes** ◉ **No**		
If yes, provide details:			

Have any measurements been taken since the last reporting period that indicate landfill gas volumes have exceeded the MOE limits for subsurface or adjacent buildings? (i.e. exceeded the LEL for methane)	○ Yes ◉ No

Groundwater WDS Verification:

Based on all available information about the site and site knowledge, it is my opinion that:

Sampling and Monitoring Program Status:

1) The monitoring program continues to effectively characterize site conditions and any groundwater discharges from the site. All monitoring wells are confirmed to be in good condition and are secure:	◉ **Yes** ○ **No**	The Town is currently undergoing consultation with the MECP regarding the Site's trigger Mechanisms Plan that may result in changes to the the currently monitoring program.
2) All groundwater, leachate and landfill gas sampling and monitoring for the monitoring period being reported on was successfully completed as required by ECA or other relevant authorizing/ control document(s):	◉ **Yes** ○ **No** ○ **Not Applicable**	If no, list exceptions below or attach information.

Groundwater Sampling Location	**Description/Explanation for change (change in name or location, additions, deletions)**	**Date**
Type Here	Type Here	Select Date

Type Here	Type Here	Select Date
Type Here	Type Here	Select Date

3) a) Some or all groundwater, leachate and landfill gas sampling and monitoring requirements have been established or defined outside of a ministry ECA, authorizing, or control document.	◉ **Yes** ◯ **No** ◯ **Not Applicable**	
b) If yes, the sampling and monitoring identified under 3(a) for the monitoring period being reported on was successfully completed in accordance with established protocols, frequencies, locations, and parameters developed as per the Technical Guidance Document:	◉ **Yes** ◯ **No** ◯ **Not Applicable**	If no, list exceptions below or attach additional information.

Groundwater Sampling Location	**Description/Explanation for change (change in name or location, additions, deletions)**	**Date**
Type Here	Type Here	Select Date
Type Here	Type Here	Select Date
Type Here	Type Here	Select Date

4) All field work for groundwater investigations was done in accordance with Standard Operating Procedures (SOP) as established/outlined per the Technical Guidance Document (including internal/external QA/QC requirements) (Note: A SOP can be from a published source, developed internally by the site owner's consultant, or adopted by the consultant from another organization):	◉ **Yes** ○ **No**	
Sampling and Monitoring Program Results/WDS Conditions and Assessment:		
5) The site has an adequate buffer, Contaminant Attenuation Zone (CAZ) and/ or contingency plan in place. Design and operational measures, including the size and configuration of any CAZ, are adequate to prevent potential human health impacts and impairment of the environment.	○ **Yes** ◉ **No**	In accordance with direction from the MECP, the Town has initiated the process to formally establish a contaminant attenuation zone (CAZ).
6) The site meets compliance and assessment criteria.	○ **Yes** ◉ **No**	
7) The site continues to perform as anticipated. There have been no unusual trends/ changes in measured leachate and groundwater levels or concentrations.	◉ **Yes** ○ **No**	

1) Is one or more of the following risk reduction practices in place at the site: ***(a)*** **There is minimal reliance on natural attenuation of leachate due to the presence of an effective waste liner and active leachate collection/ treatment; or** ***(b)*** **There is a predictive monitoring program in-place (modeled indicator concentrations projected over time for key locations); or** ***(c)*** **The site meets the following two conditions (typically achieved after 15 years or longer of site operation):** ***i.*** **The site has developed stable leachate mound(s) and stable leachate plume geometry/ concentrations; and** ***ii.*** **Seasonal and annual water levels and water quality fluctuations are well understood.**	◉ **Yes** ○ **No**	**Note which practice(s):**	☐ **(a)** ☒ **(b)** ☐ **(c)**
9) Have trigger values for contingency plans or site remedial actions been exceeded (where they exist):	◉ **Yes** ○ **No** ○ **Not Applicable**	Trigger parameters and concentrations were determined for the 2023 monitoring period. See Section 5.6.1 of the annual report.	

Groundwater CEP Declaration:

I am a licensed professional Engineer or a registered professional geoscientist in Ontario with expertise in hydrogeology, as defined in Appendix D under Instructions. Where additional expertise was needed to evaluate the site monitoring data, I have relied on individuals who I believe to be experts in the relevant discipline, who have co-signed the compliance monitoring report or monitoring program status report, and who have provided evidence to me of their credentials.

I have examined the applicable Environmental Compliance Approval and any other environmental authorizing or control documents that apply to the site. I have read and followed the Monitoring and Reporting for Waste Disposal Sites Groundwater and Surface Water Technical Guidance Document (MOE, 2010, or as amended), and associated monitoring and sampling guidance documents, as amended from time to time. I have reviewed all of the data collected for the above-referenced site for the monitoring period(s) identified in this checklist. Except as otherwise agreed with the ministry for certain parameters, all of the analytical work has been undertaken by a laboratory which is accredited for the parameters analysed to *ISO/IEC 17025:2005 (E)- General requirements for the competence of testing and calibration laboratories,* or as amended from time to time by the ministry.

If any exceptions or potential concerns have been noted in the questions in the checklist attached to this declaration, it is my opinion that these exceptions and concerns are minor in nature and will be rectified for the next monitoring/reporting period. Where this is not the case, the circumstances concerning the exception or potential concern and my client's proposed action have been documented in writing to the Ministry of the Environment District Manager in a letter from me dated:

Annual Report submitted to MECP District in July 2024

Recommendations:

Based on my technical review of the monitoring results for the waste disposal site:

No changes to the monitoring program are recommended ◉	
The following change(s) to the monitoring program is/ are recommended: ○	The Town is currently undergoing consultation with the MECP regarding the Site's trigger Mechanisms Plan that may result in changes to the the currently monitoring program.
No Changes to site design and operation are recommended ◉	
The following change(s) to the site design and operation is/are recommended: ○

Surface Water WDS Verification:

Provide the name of surface water body/bodies potentially receiving the WDS effluent and the approximate distance to the waterbody (including the nearest surface water body/bodies to the site):

Name (s)	Ponding water (southwest of landfill), Lake Huron

Distance(s)	Ponding water (SW1, SW2, SW3, SW5) = approx. 180m, 330m, 440m, 100m respectively, southwest of current fill area Ponding water (SW4) = approx. 90m southeast of current fill area Ponded water/Westland (SW7) = approx. 1km southwest of fill area access road Lake Huron = approx. 1.25 km directly south of the landfill site

Based on all available information and site knowledge, it is my opinion that:

Sampling and Monitoring Program Status:

1) The current surface water monitoring program continues to effectively characterize the surface water conditions, and includes data that relates upstream/background and downstream receiving water conditions:	◉ **Yes** ◯ **No**	
2) All surface water sampling for the monitoring period being reported was successfully completed in accordance with the ECA or relevant authorizing/control document(s) (if applicable):	◉ **Yes** ◯ **No** ◯ **Not applicable**	If no, specify below or provide details in an attachment.

Surface Water Sampling Location	**Description/Explanation for change (change in name or location, additions, deletions)**	**Date**
Type Here	Type Here	Select Date
Type Here	Type Here	Select Date
Type Here	Type Here	Select Date

3) a) Some or all surface water sampling and monitoring program requirements for the monitoring period have been established outside of a ministry ECA or authorizing/control document.	◯ **Yes** ◉ **No** ◯ **Not Applicable**	
b) If yes, all surface water sampling and monitoring identified under 3 (a) was successfully completed in accordance with the established program from the site, including sampling protocols, frequencies, locations and parameters) as developed per the Technical Guidance Document:	◯ **Yes** ◯ **No** ◉ **Not Applicable**	If no, specify below or provide details in an attachment.

Surface Water Sampling Location	Description/Explanation for change (change in name or location, additions, deletions)	Date

4) All field work for surface water investigations was done in accordance with SOP, including internal/external QA/QC requirements, as established/outlined as per the Technical Guidance Document, MOE 2010, or as amended. (Note: A SOP can be from a published source, developed internally by the site owner's consultant, or adopted by the consultant from another organization):	◉ **Yes** ○ **No**	N/A

Sampling and Monitoring Program Results/WDS Conditions and Assessment:

5) The receiving water body meets surface water-related compliance criteria and assessment criteria: i.e., there are no exceedances of criteria, based on MOE legislation, regulations, Water Management Policies, Guidelines and Provincial Water Quality Objectives and other assessment criteria (e.g., CWQGs, APVs), as noted in Table A or Table B in the Technical Guidance Document (Section 4.6):	○ **Yes** ◉ **No**

If no, list parameters that exceed criteria outlined above and the amount/percentage of the exceedance as per the table on the following page or provide details in an attachment:

Parameter	Compliance or Assessment Criteria or Background	Amount by which Compliance or Assessment Criteria or Background Exceeded
e.g. Nickel	e.g. ECA limit, PWQO, background	e.g. X% above PWQO
Boron	PWQO	SW1(253%/470%/280% - Jun/Sept/Oct); SW2 (28%/114%/158% 117% - Jun/Aug/Sept/Oct); SW4 (107%/103%/162%/93% - Jun/ Aug/Sept/Oct)
Un-ionized Ammonia	CWQG	SW1(331%/24%/392% - Jun/Sept/Oct);SW4(368%/817%/118%/ 1194%- June/Aug/Sept/Oct)
	AAC	SW4(74%/146-Aug/Oct)
Iron	PWQG/CWQG	SW1(966%/46%/373% -Jun/Sept/Oct);SW2(3%/27%/115%/110% - Jun/Aug/Sept/Oct);SW4(4767%/6167%/9533%/14233% - Jun/ Aug/Sept/Oct);SW6(38%/777% - Jun/Aug);SW7(2760%/3940% 6810%/276% - Jun/Aug/Sept/Oct)
	AAC	SW1(42%-Oct);SW4(1360%/1780%/2790%/4200%-Jun/Aug/ Sept/Oct);SW6(163%-Jun);SW7(2760%/3940%/6810%/276% - Jun/Aug/Sept/Oct
Nitrite	CWQG	SW1(18.3%/218%-Jun/Sept)
Total Phosphorus	PWQO	SW1(536%/194%/97%-Jun/Sept/Oct);51%/51%59%88 -Jun/Aug/ Sept/Oct);SW4(1380%/1510%/2130%/2260%-Jun/Aug/Sept/Oct; SW6(580%/2610%/394%-Jun/Aug/Oct);SW7(3590%/8360%/ 11800%/522%-Jun/Aug/Sept/Oct
Phenols	PWQO	SW1(130%/90%-Jun/Oct);SW2(60%/340%/100%-Jun/Sept/Oct); SW4(130%/180%220%/90%-June/Aug/Sept/Oct);SW6(60%/
	CWQG	280%-Jun/Aug);SW7(210%/180% - Aug/Sept) SW2(10%-Sept)
*Additional Parameters Attached		
6) In my opinion, any exceedances listed in Question 5 are the result of non-WDS related influences (such as background, road salting, sampling site conditions)?	◯ **Yes** ◉ **No**	Previous surface water quality assessments have stated that leachate appears to be effecting water quality in the ponding water locations just south and southwest of the landfill site.

7) All monitoring program surface water parameter concentrations fall within a stable or decreasing trend. The site is not characterized by historical ranges of concentrations above assessment and compliance criteria.	○ **Yes** ◉ **No**	Since the surface water sampling program began at the Blind River Municipal landfill site in November of 2004, boron, iron and phenols have consistently exceeded PWQO criteria.
8) For the monitoring program parameters, does the water quality in the groundwater zones adjacent to surface water receivers exceed assessment or compliance criteria (e.g., PWQOs, CWQGs, or toxicity values for aquatic biota (APVs)):	◉ Yes ○ No ○ Not Known ○ Not Applicable	MW1-20 failed to meet the following criteria: -AAC/CWQG for chloride during the spring and fall -PWQO for total phosphorus during the spring -PWQO/CWQG for arsenic, cadmium,copper, iron, lead and zinc during the spring and fall -AAC for cadmium, copper, iron, lead and zinc during the spring and fall -CWQO for manganese during the spring and nickel during the fall MW1-03 failed to meet the following criteria: -AAC/CWQG for chloride during the spring and fall -PWQO for total phosphorus during the spring -PWQO/CWQG for boron, iron and lead during the fall -CWQG for copper during the fall -AAC for iron,
9) Have trigger values for contingency plans or site remedial actions been exceeded (where they exist):	◉ **Yes** ○ **No** ○ **Not Applicable**	Trigger parameters and concentrations were determined for the 2023 monitoring period. See Sections 5.6.1 and 5.6.2 of the annual report.

Surface Water CEP Declaration:

I, the undersigned hereby declare that I am a Competent Environmental Practitioner as defined in Appendix D under Instructions, holding the necessary level of experience and education to design surface water monitoring and sampling programs, conduct appropriate surface water investigations and interpret the related data as it pertains to the site for this monitoring period.

I have examined the applicable Environmental Compliance Approval and any other environmental authorizing or control documents that apply to the site. I have read and followed the Monitoring and Reporting for Waste Disposal Sites Groundwater and Surface Water Technical Guidance Document (MOE, 2010, or as amended) and associated monitoring and sampling guidance documents, as amended from time to time. I have reviewed all of the data collected for the above-referenced site for the monitoring period(s) identified in this checklist. Except as otherwise agreed with the ministry for certain parameters, all of the analytical work has been undertaken by a laboratory which is accredited for the parameters analysed to *ISO/IEC 17025:2005 (E)- General requirements for the competence of testing and calibration laboratories,* or as amended from time to time by the ministry.

If any exceptions or potential concerns have been noted in the questions in the checklist attached to this declaration, it is my opinion that these exceptions and concerns are minor in nature or will be rectified for future monitoring events. Where this is not the case, the circumstances concerning the exception or potential concern and my client's proposed action have been documented in writing to the Ministry of the Environment District Manager in a letter from me dated:

Annual Report submitted to MECP District in July 2024.

Recommendations:

Based on my technical review of the monitoring results for the waste disposal site:

◉ **No Changes to the monitoring program are recommended** ○ **The following change(s) to the monitoring program is/are recommended:**	
◉ **No changes to the site design and operation are recommended** ○ **The following change(s) to the site design and operation is/ are recommended:**
